Revision History

Revision	Date	Revision Description			
0.0	July 11,2001	First Draft issue			
1.0	Apr 28, 2003	First issue (All in One Copy)			
1.1	Oct 7, 2003	Add VBV Parameters for Server Side Integration			
1.2	Nov 1, 2003	Modify VBV Parameters for Server Side Integration			
1.3	Nov 6, 2003	Deleted Data Feed Retry Message			
1.4	Nov 13, 2003	Add AuthId to Data Feed Output			
1.5	Feb 20, 2004	Add JCB Card Type and Japanese Lang Parameter			
1.6	Mar 9, 2004	All-in-One Version			
1.7	May 6, 2004	Add JPY and TWD Currency Code			
1.8	May 13, 2004	Add data feed flow comment			
	•				
1.9	Aug. 20, 2004	Add AMEX and Security Code parameter			
2.0	Sept 14, 2004	Add Payment Flow, 3D Transaction, PayPal Transaction and New Currencies			
2.1	Oct 8, 2004	Modify the pop-up flow to be inline flow of 3D Transaction			
2.2	Dec 6, 2004	Add errorUrl parameter to Direct Client Side Connection			
2.3	Sep 15, 2005	Add ECI and Payer Authentication Status to datafeed section			
2.5	Jan 25, 2006	Add data feed port requirement			
2.6	Mar 30, 2006	Add new parameters to datafeed :			
		- sourcelp			
		- ipCountry			
2.7	Jun 15, 2006	Add sample data feed page in ASP.			
2.8	Jun 20, 2006	Modified Payment Method to support CUP.			
2.9	Nov 27, 2006	Add Transaction Handling and FAQ Section			
3.0	Aug 30, 2007	Add Alipay payment method			
3.1	Jan 24, 2008	Language update – Supporting Thai			
3.11	June, 25, 2008	Revise and updated content			
3.2	Mar 25, 2009	Add China UnionPay (CHINAPAY) payment method			
3.2.1	Apr 29, 2009	Add new parameter "payMethod" to Data Feed Output			
3.2.2	May 14, 2009	Add APPENDIX			
3.3	Nov 5, 2009	Add Tenpay and 99bill payment method			
3.4	Dec 18, 2009	Add new optional parameter for connect to payment page.			
		Origin Country and Destination Country			
3.5	Jun 1, 2010	Add new parameter "cardlssuingCountry" to Data Feed Output			
3.5.5	Jun 25, 2010	Add new parameter "channelType" to Data Feed Output			
3.6	Jun 29,2010	Add new function "Multi-Currency Processing" and merge "Server Side Direct Connection" Spec into one spec. Move "Data Feed Handling" into a new section. Add mps fields in datafeed and merchant api.			
3.7	Jul 27, 2010	Add Secure Hash Function.			
		Add new optional parameter "amount" for Merchant API RequestRefund action			

3.8	Dec 6,2010	Merchant can set Return Value Link (Data Feed) at merchant admin			
		Language update – Supporting French, German, Russian and Spanish			
3.9	Feb 16, 2011	Add new optional parameters on Client Post Through Browser for disable the print and retry function at payment result page.			
3.10	Apr 1, 2011	Update the description of the parameter "payType" for integration.			
		Add new parameters "mSchPayld", "dSchPayld" to Data Feed Output.			
3.11	Apr 20, 2011	Add MOP, PHP, THB, MYR, IDR and KRW Currency Code			
3.12	Jun 1, 2011	Update the list of response code from PesoPay			
3.13	Jul 12, 2011	Add SAR, NZD, AED, BND Currency Code			
		Add MEPS payment method			
		Add MemberPay Service integration parameters			
3.14	Nov 2, 2011	Update Browser version compatibility			
		Update IP Ranges			
		Add "AMEX SafeKey"			
		Update the wording of "3D-Secure" to "3-D Secure"			
		Add datafeed return parameters (AlertCode and Merchantld)			
3.15	Jan 30,2012	Update Debit payment for Thailand			
		Add SCB , BAY, UOB, TMB , UOB , KTB , IBANKING, Bill Payment			
3.16	Jun 6, 2012	Add Installment service			
3.17	Jun 27, 2012	Update testing environment IP Ranges			
3.18	Aug 3, 2012	Add Airline data support			
		- Air Ticket Number			
3.19	Oct 5, 2012	Add new optional parameters panFirst4, panLast4, accountHash and			
		accountHashAlgo to Data Feed Out and Merchant API Query			
		Add new payment method "UPOP"			
3.20	Jan 8, 2013	Add customer billing information			
3.21	Jan 28, 2013	Add payment gateway transaction time into datafeed and query function			
3.22	Jun 13, 2013	Add VND Currency Code			
3.23	Jun 21,2013	Add 99BILL, ALIPAY, CHINAPAY, PAYPAL, PPS, TENPAY, MEPS,			
		OCTOPUS, ENETS, MYCLEAR, POLI, UPOP, UPOP-GNETE, UPOP-DNA,			
		FUIOU, SCB, KRUNGSRIONLINE, KTB, UOB, TMB, IBANKING, BPM,			
		GCash, BancNet, SMARTMONEY into direct client side connection method			
3.24	Aug 22, 2013	Add M2U and CIMBCLICK			
3.25	Nov 11, 2013	Add new optional parameter "panFull" to Data Feed output and Merchant API			
		Query.			
3.26	Nov 22, 2013	Add new currency INR			
3.27	Feb 18, 2014	Add new language Vietnamese			
3.28	Mar 19, 2014	Add OCTOPUS			
3.29	May 29, 2014	Add "mpLatestStaticToken" and "mpMemberId" in DataFeed			
	, , -				

		Add "timeout) (alus" to control Octonus timeout value
3.30	Jun 06, 2014	Add "timeoutValue" to control Octopus timeout value
3.31	Jul 03, 2014	Add "hiddenAmount" and "expDateCheck", for Client Post Through Browser
3.32	Oct 06, 2014	- Add Ewallet Integration Parameters in Direct Client Side Connection and Server Side Direct Connection
		- Add Ewallet information in Data Feed Response
3.33	Oct 31, 2014	Add WeChat payment method
3.34	Nov 3, 2014	Add Multi Currency Pricing and Integration Parameters for card data
		encryption
3.35	Nov 25, 2014	Update description of optional parameter "foreignAmount" on MCP Function
3.36	Dec 2, 2014	Add "promotionCode", "promotionRuleCode", "promotionOriginalAmt" on
		Query API
3.37	Dec 12, 2014	Add ONEPAY (ATM Card) Payment Method
3.38	Mar 19, 2015	Change the type of "Ord"
3.39	Jun 11, 2015	Add new parameters "rewardsRedeemTotalAmt", "rewardsRedeemType", "rewardsRedeemProgram", "rewardsRedeemCode1", "rewardsRedeemLabel1", "rewardsRedeemAmt1", "rewardsBalance1", "rewardsRedeemCode2", "rewardsRedeemLabel2", "rewardsRedeemAmt2", "rewardsBalance2", "rewardsRedeemCode3", "rewardsRedeemLabel3", "rewardsRedeemAmt3", "rewardsBalance3" to Data Feed Output and Query API Output
3.40	Aug 19, 2015	Add new parameters "netAmtAfterRewards" to Data Feed Output and Query API Output
		Add new parameters "netAmtAfterRewards ", "rewardsRedeemTotalAmt", "rewardsRedeemType", "rewardsRedeemProgram", "rewardsRedeemCode1", "rewardsRedeemLabel1", "rewardsRedeemAmt1", "rewardsBalance1", "rewardsRedeemCode2", "rewardsRedeemLabel2", "rewardsRedeemAmt2", "rewardsBalance2", "rewardsRedeemCode3", "rewardsRedeemLabel3", "rewardsRedeemAmt3", "rewardsBalance3" to Capture API Output
3.41	Sep 14, 2015	Add VISA Checkout and MasterPass Payment Method
3.42	Sep 16,2015	Add installOnly
3.43	Sep 23,2015	Revise output of "Settlement Report Request"
		Update description of Datafeed for VISA Checkout
3.44	Nov 12, 2015	Add VISA Checkout and MasterPass Payment Method
3.45	Dec 16,2015	Change the length of "5atched"
3.46	Jan 22, 2016	Add API function – Query payment request log
3.47	Jan 26, 2016	Add new parameter "payMode" for control which payment mode use of
		transaction
3.48	Jan 28, 2016	Updates on API function – Query payment request log
		Update compatible version of browsers
3.49	Apr 6, 2016	Updates Datafeed
		Updates API return value

Updates API return value

Add WELEND, update settlement report request

3.50

3.51

Apr 28,2016

May 23,2016

3.52	Sep 12, 2016	Change IP Address of UAT server
3.53	Feb 7, 2017	Add new integration parameter "orderPhoneNo"
3.54	Mar 14, 2017	Add installment provider datafeed output
		Add VA payment flow
		Add Credit Card with Installment flow
3.55	May 12, 2017	Add new API function "Cancel Payment" (Only for payment bank FASPAY)
3.56	Aug 28, 2017	Update example of source codes
3.57	Jun 18, 2019	Add MoMo Payment
3.58	July 15, 2019	Add Samsung Pay Payment
3.59	Sep 24, 2019	Add 3DS 2.0 related parts.
		Update the list of "Response Code From PesoPay"
		Add PaySDK iOS
		Add PaySDK Android
3.60	Oct 17, 2019	Flow chart Update.
		Update length for field named "threeDSVersion"
3.61	Jan 03, 2020	Added Wechat Payment in PaySDK iOS and PaySDK Android
3.62	Jul 27, 2020	Added New Payment Method and eWallet Code
		Updated SRC, PRC and ORD data type
3.63	Sep 2, 2020	Update PesoPay production IP range
3.64	Sep 29, 2020	Add new integration section "Optional Parameter for Shipping address" and
		"Optional Parameter for Customer Detail"
3.65	Jul 14, 2021	Update appUrlScheme, remark parameter details
		Update secureHash calculation
		Add new PRC code
		Add new payment method
3.66	Oct 21, 2021	Add new payment methods

1 Overview

Introduction

PesoPay PayGate is a powerful web-based online payment services platform, which provides secure, multi-channel, multi-lingual and multi-currency payment services. It is used by many renowned companies and organizations in the region.

This technical specification document prescribes the constituent parts of specification for integration of an e-commerce web site with PesoPay e-commerce service, the on-line payment service by AsiaPay (HK) Limited, by subscribed merchants of the service. This document has been created to ensure that all technical specifications contain sufficient information to enable a merchant to design and modify the codes of an existing on-line shopping architecture or software to cater for the payment –enabling service. It also provides a checklist to enable the reviewers of specifications to conduct tests on the functionalities of the integration.

There is an extra parameter section under each connection method. That section is especially designed for 3DS 2.0 (Three Domain Secure 2.0). 3DS authentication is an additional security layer for card-not-present transactions. With 3DS 2.0, it is aimed to achieve a better, stronger fraud-detection intelligence.

PesoPay PayGate facilitates merchant to connect to our network with great flexibility. Merchant can choose one of the following integration methods, which will be described in detail in the document.

- Client Post through Browser (e.g. Shopping Cart)
- Direct Client Side Connection
- Server Side Direct Connection (e.g. IVR System, Mobile App)

Moreover, a list of merchant API functions will be also described in detail in the later section.

2 Connection method

2.1 Client Post Through Browser

It is the most popular connection method among merchants. The advantage of this connection method is simple and speedy. On the other hand, payment transaction flow is ready to use. Merchant can kick off the web site on-the-fly with just a small scale integration.

Scope and Compatibility

This connection is designed for merchants who have *Online Shopping Cart System*. The routine is HTML-based with Javascript and should be widely applicable to on-line shopping cart software and architecture, whose technical specifications and varieties are beyond the scope of this document. Compatibility with shopping cart software is yet to be exhaustively given and would not be included in the scope of this document.

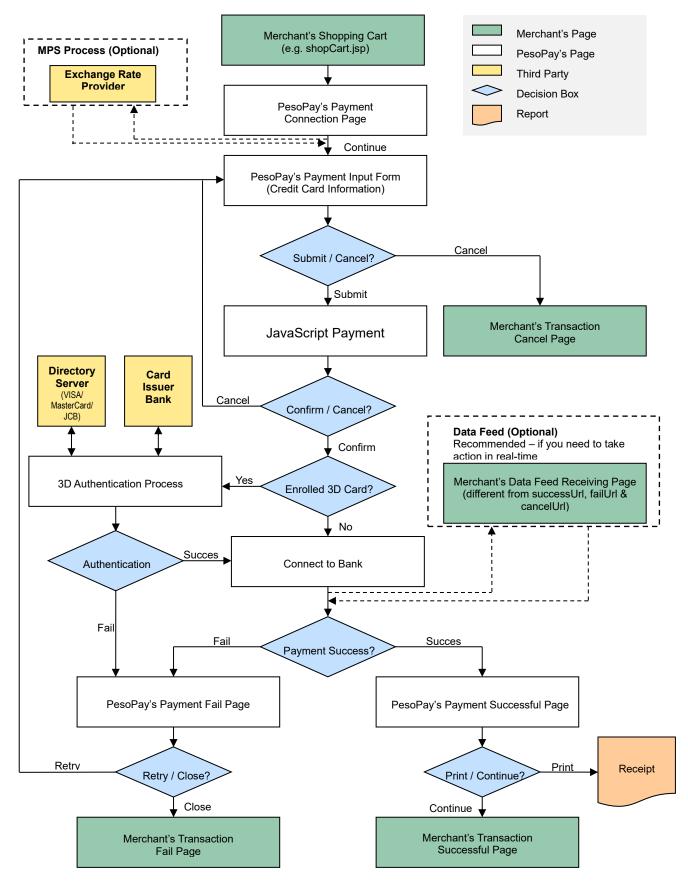

The compatible version of the software code is as follow:

Software Code	Version
HTML	4.0
Javascript	1.3

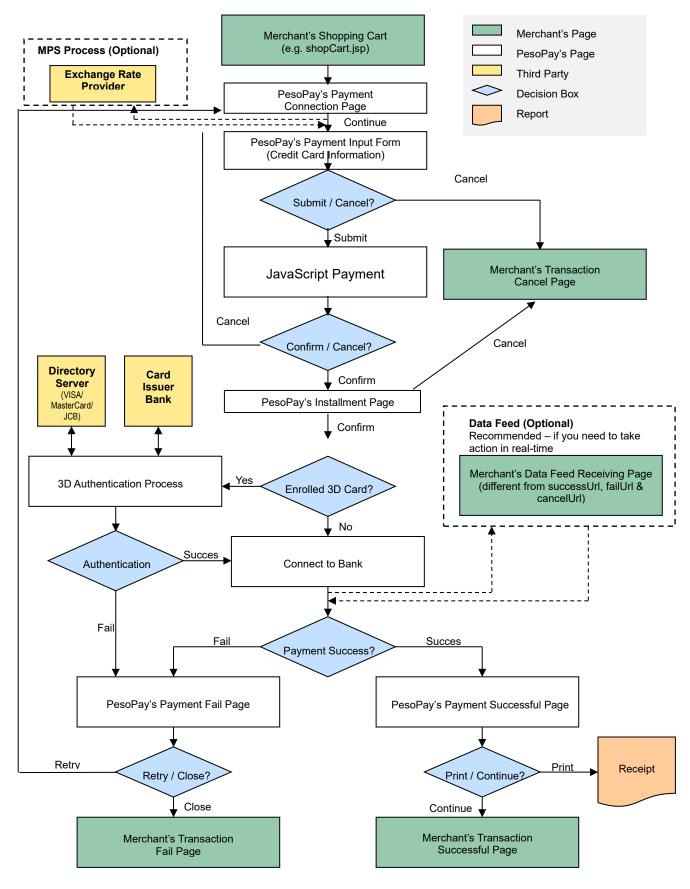

The version compatibility of the software code with popular browser software is as follow:

Browser	Version
Microsoft Internet Explorer	11 or above
Mozilla Firefox	27 or above
Google Chrome	30 or above
Safari	7 or above

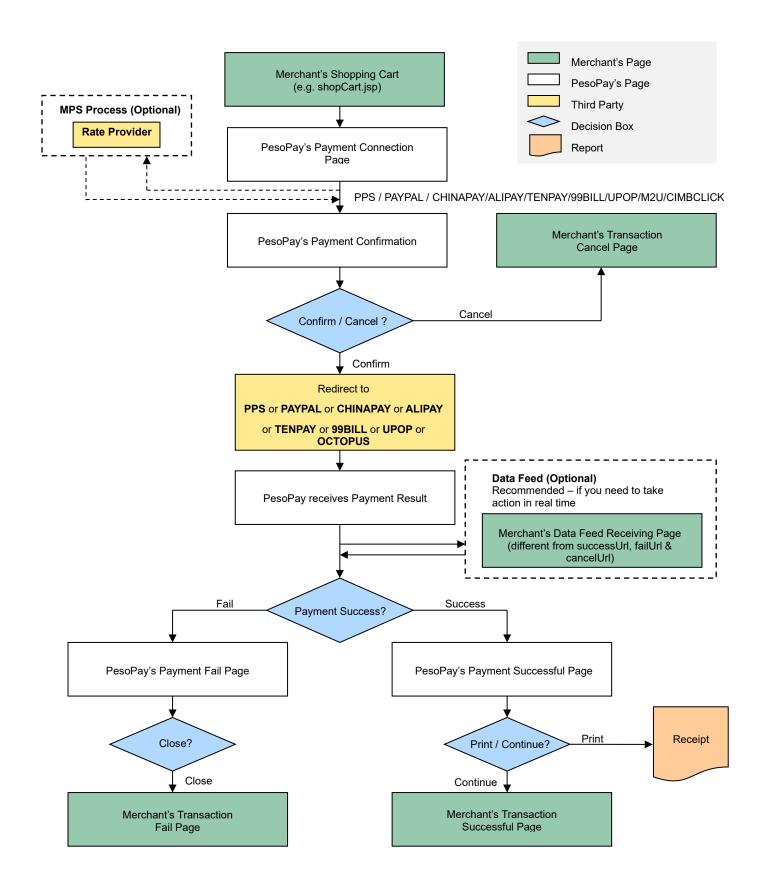

Credit Card Payment Flow

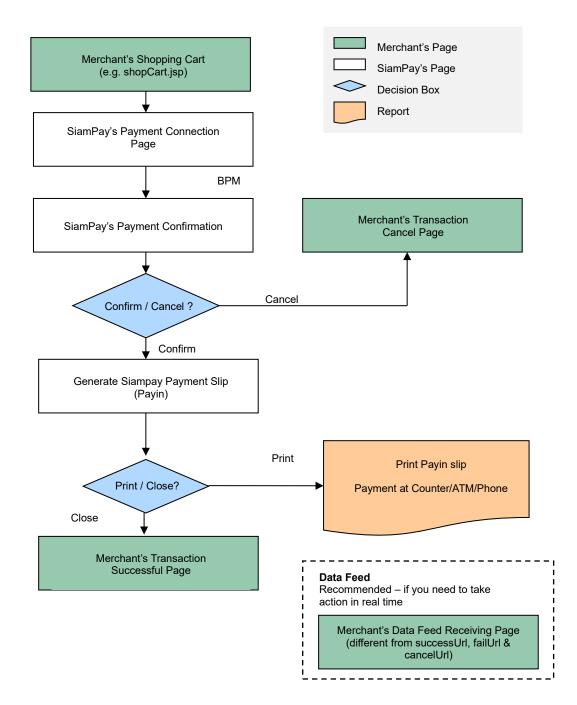

Credit Card with Installment Payment Flow

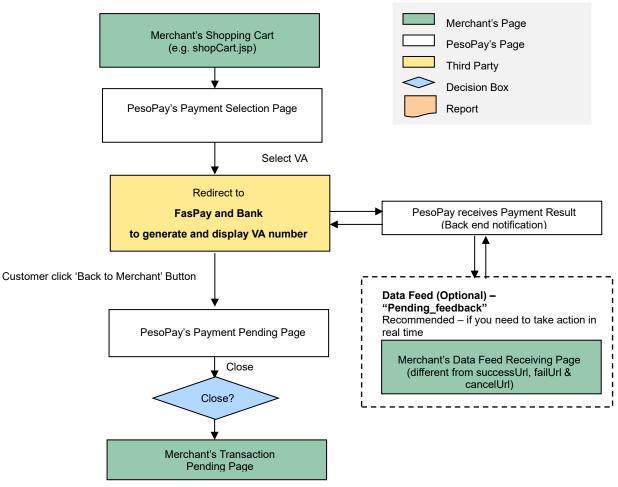

99BILL, ALIPAY, CHINAPAY, PAYPAL, PPS, TENPAY, SCB, BAY, KTB, UOB, TMB, BBL iBanking, UPOP, M2U, CIMBCLICK, OCTOPUS, WECHAT, ONEPAY Payment Flow

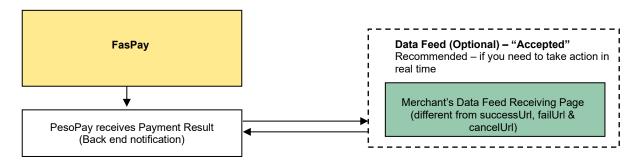

Bill Payment Flow (BPM)

Step 1: Customer generate Virtual Account online

Step 2: Customer pay to Virtual Account offline before expiry date

It is notable that the software codes of the payment routine, whose example is as given, should be embedded into the integration page, as in above, which should be able to generate the sum of purchase from the previous shopping practice of the user. The subsequent parts of the flow would be directed to system architecture in which the payment details are to be submitted by the user, and handled for settlement and clearance.

Definition of Parameters in the Integration Page

The following are the parameters for integration. PesoPay PayGate is case sensitive. Make sure the typeface is correct. When a transaction is finished, the system will return customer a payment message. Merchant can create static HTML pages to display the message. If merchant's web site supports data feed, the system can return payment message as shown in the following table.

Parameters	Data Type	Descriptions		
Required	Parameter (with	UTF-8 Encoding) for co	onnect to our pay	ment page
orderRef	Text (35)	Merchant's Order Refere	ence Number	
currCode	Text (3)	The currency of the payr "344" – HKD "156" – CNY (RMB) "036" – AUD	"840" – USD "392" – JPY "978" – EUR	"702" – SGD "901" – TWD "826" – GBP

		"MCP" – Enable MPS with 'Multi Currency Pricing'
		For merchant who applied MPS function
multiRateID	Text (12)	Unique Rate ID
		*Returned from API function "MCPMultiRateEnquiry"
mpsExRate	Number (10,4)	Exchange rate between the merchant's base currency and the foreign
		currency.
		*Returned from API function "MCPMultiRateEnquiry"
foreignCurrCode	Text (3)	Foreign currency code
foreignAmount	Number (12,2)	Calculated foreign amount
		*The foreign amount should be converted from a base amount with
		minimum value HKD10 / MOP10 to avoid tolerance check failure.
		ional Parameter for Promotion
promotion	Text(1);	Enable / Disable the promotion
	("T" or "F")	
promotionCode	Text(8);	The promotion campaign code
promotionRuleCode	Text(8);	The promotion rule code
promotionOriginalAmt	Number (12,2)	The promotion original amount
		meter for connect to our payment page
remark	Text (50)	A remark field for you to store additional data that will not show on the
. .		transaction web page
redirect	Number	Number of seconds auto-redirection to merchant's site takes place at
		PesoPay's Payment Success / Fail page
oriCountry	Number(3)	Origin Country Code
		Example:
		344 – "HK"
		840 – "US"
destCountry	Number(3)	Destination Country Code
		Example:
		344 – "HK" 840 – "US"
a a ural la a h	$T_{0,4}(40)$	
secureHash	Text (40)	Secure hash is used to authenticate the integrity of the transaction
		information and the identity of the merchant. It is calculated by hashing the combination of various transaction parameters and the Secure Hash
		Secret.
		*Applies to merchants who registered this function only. For more
		information, please refer to section 4.

print	Text(2) ; ("no")	Disable the print function at payment result page.
failRetry	Text(2) ; ("no")	Disable the retry function when the transaction is rejected
timeoutValue	Number	Timeout Value in second, only for OCTOPUS payment and ranged 180 and 7200
hiddenAmount	Text (1) ("T","F")	Flag to control the display of amount. "T" for showing amount and "F" for not showing display of amount. *Enable to approved merchant only.
expDateCheck	Number	Value to control the expiry date checking. Eg. If "1" is submitted, the card expiry date must not be expired in one month. Only integer is allowed and minimum value is "1" and maximum value is "192". *Enable to approved merchant only.
payMode	Text(2)	Payment Mode "EC" - Electronic Commerce (Default) "MO" - Mail Order "RC" - Recurring
orderPhoneNo	Text(30)	Phone Number of order
appUrlScheme	Text	 iOS Universal Link or Android App Link URL for Web-2-App flow return to the merchant App from the payment App Available for the following payment method: "OCTOPUS" – iOS (Mobile flow) "ALIPAYHKONL" – iOS, Android (Deeplink flow) "WECHATONL" – iOS, Android (Mobile H5 flow)
deeplink	Text(1)	Flag for the Web-2-App flow "0": (Default) Redirect to Payment Service Host directly "1": Call Payment Service token with Deeplink directly "2": Display summary page with button of Deeplink "3": Display summary page with button of Deeplink and Redirect Available for "ALIPAYHKONL"
oaflag	Text (1) ("T","F")	To enable to use JSAPI (Payment Service In-App Webview Payment) Available for "WECHATONL"
Optional Parame		address (required to be eligible for PayPal Seller Protection)
shippingAddress1	Text (240)	The first line of the shipping address. Must contain the full address
shippingAddress2	Text (240)	The second line of the shipping address. eg.suite or apartment number
shippingCity	Text (100)	The city of the shipping address
shippingState	Text (100)	The state of the shipping address
shippingPostalCode	Text (50)	The postal code of shipping address which is the zip code or equivalent
shippingCountryCode	Text (2)	The country code that identified the country or region
Optional Parame	ter for customer	details (required to be eligible for PayPal Seller Protection)

customer_firstName	Text (50)	Customer's first name
customer_lastName	Text (50)	Customer's last name
customer_email	Text (100)	Customer's email address
customer_account_id	Text (100)	Unique identifier of the customer
customer_phone	Text (100)	Customer's phone number
customer_country_code	Text (2)	Customer's country code that identified the country or region eg.US
customer_create_date	Text (14)	Date after which no further payment shall be performed. Format: yyyyMMDDHHmmss e.g. "20200401122630"

Parameters for Supporting 3DS 2.0

The following are the parameters especially for 3DS 2.0. Merchant shall fulfill the parameters requirement to start using 3DS 2.0. The parameters are case sensitive and should be in UTF-8 encoding.

Parameters	Data Type	Mandatory	Descriptions			
Basic Parameters						
threeDSTransType	Text (2)	No	Transaction type.			
			Select the most suitable one.			
			"01" – Goods/ Service Purchase			
			* Default value if threeDSTransType not			
			provided.			
			"03" – Check Acceptance			
			"10" – Account Funding			
			"11" – Quasi-Cash Transaction			
			"28" - Prepaid Activation and Load			
threeDSCustomerEmail	Text (254)	No	The customer's email address			
			* Strongly suggest to provide if available.			
			Shall meet requirements of Section 3.4 of			
			IETF RFC 5322.			
threeDSMobilePhoneCountryCode	Text (3)	No	Customer's mobile phone number country code.			
			Provide if available.			
			If "threeDSMobilePhoneCountryCode" is			
			provided, "threeDSMobilePhoneNumber" should			
			also be provided.			
			e.g. "852" – Hong Kong			
threeDSMobilePhoneNumber	Text (15)	No	Customer's mobile phone number.			
			Provide if available.			

			If "threeDSMobilePhoneNumber" is provided, "threeDSMobilePhoneCountryCode" should also
			be provided.
threeDSHomePhoneCountryCode	Text (3)	No	Customer's home phone number country code. Provide if available. If "threeDSHomePhoneCountryCode" is provided, "threeDSHomePhoneNumber" should also be provided. e.g. "852" – Hong Kong
threeDSHomePhoneNumber	Text (15)	No	Customer's home phone number. Provide if available. If "threeDSHomePhoneNumber" is provided, "threeDSHomePhoneCountryCode" should also be provided.
threeDSWorkPhoneCountryCode	Text (3)	No	Customer's work phone number country code. Provide if available. If "threeDSWorkPhoneCountryCode" is provided, "threeDSWorkPhoneNumber" should also be provided. e.g. "852" – Hong Kong
threeDSWorkPhoneNumber	Text (15)	No	Customer's work phone number. Provide if available. If "threeDSWorkPhoneNumber" is provided, "threeDSWorkPhoneCountryCode" should also be provided.
threeDSIsFirstTimeItemOrder	Text (1)	No	Flag to show if the customer is re-ordering the item / product. i.e. purchasing the same item / product Provide only if the payment related to purchase item / product. "T" – It is the first time the customer purchases this item / product. "F" – It is the NOT the first time the customer purchases the item / product, it is re-ordering.
threeDSChallengePreference	Text(2)	No	Indicates whether a challenge is requested for this transaction. "01" – No preference * Default value if threeDSChallengePreference

			 not provided. "02" – No challenge requested * "03" – Challenge requested (Merchant preference) "04" – Challenge requested (Mandate) "05" – No challenge requested (transactional risk analysis is already performed) * "06" – No challenge requested (Data share only)* "06" – No challenge requested (strong consumer authentication is already performed) * "08" – No challenge requested (utilise whitelist exemption if no challenge required) * "09" – Challenge requested (whitelist prompt requested if challenge required) ** If "No challenge requested" options are selected, the chargeback liability shift to merchant.
Recurring / Installment Payment	Related (Pro	vide only if it i	s a recurring / installment payment)
threeDSRecurringFrequency	Text (4)	Yes (Only for recurring / installment payment)	Minimum number of days between payment. e.g. "30" – 30 days between payments.
threeDSRecurringExpiry	Text (8)	Yes (Only for recurring / installment payment)	Date after which no further payment shall be performed. Format: YYYYMMDD e.g. "20190401"
Billing Address Re	lated (Provid	e only if billing	g address is available)
threeDSBillingCountryCode	Text (3)	Yes (Only if billing address is available)	Payment cardholder billing country. Shall be the ISO 3166-1 numeric three-digit country code. e.g. "344" – Hong Kong, "840" – US
threeDSBillingState	Text (3)	No	Payment cardholder billing state Should be the country subdivision code defined in ISO 3166-2. Provide if available, as some countries do not have subdivision code.

			e.g. "PE" – Prince Edward Island of California
threeDSBillingCity	Text (50)	Yes (Only if billing address is available)	Payment cardholder billing city e.g. "Hong Kong"
threeDSBillingLine1	Text (50)	Yes (Only if billing address is available)	Payment cardholder billing address line 1
threeDSBillingLine2	Text (50)	No	Payment cardholder billing address line 2 Provide if available
threeDSBillingLine3	Text (50)	No	Payment cardholder billing address line 3 Provide if available
threeDSBillingPostalCode	Text (16)	No	Payment cardholder billing postal code Provide if available
Shipping / Delivery Related	(Provide only	y if the payme	nt requires shipping / delivery)
threeDSDeliveryTime	Text (2)	No	The delivering time for this purchase. "01" – Electronic Delivery "02" – Same day shipping "03" – Overnight shipping "04" – Two-day or more shipping
threeDSDeliveryEmail	Text (254)	No	The email recipient of the purchased product. Provide only if the purchased product is using electronic delivery.
threeDSShippingDetails	Text (2)	No	Shipping details / type. Select the most suitable one. "01" – Ship to cardholder's billing address "02" – Ship to another verified address stored in merchant "03" – Ship to address that is different than the cardholder's billing address "04" – Ship to Store / Pick-up at local store (Store address shall be populated in shipping address fields) "05" – Digital goods (includes online services, electronic gift cards and redemption codes) "06" – Travel and Event tickets, not shipped "07" – Other (for example, Gaming, digital

			services not shipped, e-media subscriptions, etc.)
		No	Shipping / delivery country.
			Shall be the ISO 3166-1 numeric three-digit
			country code.
threeDSShippingCountryCode	Text (3)		e.g. "344" – Hong Kong, "840" – US
		No	Shipping / delivery state
			Should be the country subdivision code defined
			in ISO 3166-2
threeDSShippingState	Text (3)		e.g. "PE" – Prince Edward Island of California
threeDSShippingCity	Text (50)	No	Shipping / delivery city.
			e.g. "Hong Kong"
threeDSShippingLine1	Text (50)	No	Shipping / delivery address line 1
threeDSShippingLine2	Text (50)	No	Shipping / delivery address line 2
			Provide (if available).
threeDSShippingLine3	Text (50)	No	Shipping / delivery address line 3
			Provide (if available).
threeDSShippingPostalCode	Text (16)	No	Shipping / delivery postal code
			Provide (if available).
threeDSIsAddrMatch	Text (1)	No	Flag for comparing the billing address and
			shipping address.
			Provide (if available).
			"T" - Shipping address matches billing address
			"F" – Shipping address NOT match billing
			address
Gift Card / Prepaid Card Purchase Re	lated (Provide	e only if the pu	irchase related to gift card / prepaid card)
threeDSGiftCardAmount	Text (15)	No	Gift card / prepaid card purchase amount.
threeDSGiftCardCurr	Text (3)	No	Gift card / prepaid card purchase currency.
			ISO 4217 three-digit currency code.
			e.g. "344" – HKD
threeDSGiftCardCount	Text (2)	No	Number of gift card / prepaid card purchasing.
			e.g. "12" – Purchasing 12 gift cards
Pre-Order Purchase Rela	ted (Provide	only if the pay	ment is related to Pre-Order)
threeDSPreOrderReason	Text (2)	No	The pre-order reasons.
			"01" - The pre-order is due to merchant
			availability, i.e. the purchasing product is not
			available due to the insufficient stock in the

			merchant. "02" – The pre-order is for future release product,
			i.e. the purchasing product is going to be released on future date.
threeDSPreOrderReadyDate	Text (8)	No	The expected ready date of the pre-order. Format: YYYYMMDD e.g. "20190401"
Account Info Relate	ed (Provide or	nly if there is	s user account in merchant)
threeDSAcctCreateDate	Text(8)	No	Date that the cardholder opened the account. Format: YYYYMMDD e.g. "20190401"
threeDSAcctAgeInd	Text(2)	No	Length of time that the cardholder has had the account. • 01 = No account (guest check-out) • 02 = Created during this transaction • 03 = Less than 30 days • 04 = 30-60 days • 05 = More than 60 days
threeDSAcctLastChangeDate	Text(8)	No	Date that the cardholder's account was last changed, including Billing or Shipping address, new payment account, or new user(s) added. Format: YYYYMMDD e.g. "20190401"
threeDSAcctLastChangeInd	Text(2)	No	Length of time since the cardholder's account information was last changed, including Billing or Shipping address, new payment account, or new user(s) added. • 01 = Changed during this transaction • 02 = Less than 30 days • 03 = 30-60 days • 04 = More than 60 days
threeDSAcctPwChangeDate	Text(8)	No	Date that cardholder's account had a password change or account reset. Format: YYYYMMDD e.g. "20190401"
threeDSAcctPwChangeInd	Text(2)	No	Indicates the length of time since the cardholder's account had a password change or

			account reset. • 01 = No change • 02 = Changed during this transaction • 03 = Less than 30 days • 04 = 30-60 days • 05 = More than 60 days
threeDSAcctPurchaseCount	Text(4)	No	Number of purchases with this cardholder account during the previous six months. e.g. "13" – Purchased 13 times during the previous six months
threeDSAcctCardProvisionAttempt	Text(3)	No	Number of Add Card attempts in the last 24 hours. e.g. "2" – Tried add card 2 times
threeDSAcctNumTransDay	Text(3)	No	Number of transactions (successful and abandoned) for this cardholder account across all payment accounts in the previous 24 hours. e.g. "2" – Processed 2 transactions
threeDSAcctNumTransYear	Text(3)	No	Number of transactions (successful and abandoned) for this cardholder account across all payment accounts in the previous year. e.g. "10" – Processed 10 transactions
threeDSAcctPaymentAcctDate	Text(8)	No	Date that the payment account was enrolled in the cardholder's account. Format: YYYYMMDD e.g. "20190401"
threeDSAcctPaymentAcctInd	Text(2)	No	Indicates the length of time that the payment account was enrolled in the cardholder's account. • 01 = No account (guest check-out) • 02 = During this transaction • 03 = Less than 30 days • 04 = 30-60 days • 05 = More than 60 days
threeDSAcctShippingAddrLastChangeDate	Text(8)	No	Date when the shipping address used for this transaction was first used. Format: YYYYMMDD e.g. "20190401"
threeDSAcctShippingAddrLastChangeInd	Text(2)	No	Indicates when the shipping address used for

			this transaction was first used
			• 01 = This transaction
			• 02 = Less than 30 days
			• 03 = 30–60 days
			• 04 = More than 60 days
threeDSAcctIsShippingAcctNameSame	Text(1)	No	Indicates if the Cardholder Name on the account
			is identical to the shipping Name used for this
			transaction.
			"T" - Account name identical to shipping name
			"F" - Account name different than shipping name
threeDSAcctIsSuspiciousAcct	Text(1)	No	Indicates whether has experienced suspicious
			activity (including previous fraud) on the
			cardholder account.
			"T" – Suspicious activity has been observed
			"F" - No suspicious activity has been observed
Account Authentication Info	Related (Pro	vide only if th	ere is user account in merchant)
threeDSAcctAuthMethod	Text(2)	No	Mechanism used by the Cardholder to
	. ,		authenticate.
			• 01 = No authentication occurred (i.e. cardholder
			"logged in" as guest)
			• 02 = Login to the cardholder account at the
			merchant system using merchant's own
			credentials
			 03 = Login to the cardholder account at the
			merchant system using federated ID
			• U4 – Login to the caronolder account at the
			 04 = Login to the cardholder account at the merchant system using issuer credentials
			merchant system using issuer credentials
			werchant system using issuer credentials05 = Login to the cardholder account at the
			 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication
			 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the
threeDSAcctAuthTimestamn	Text(8)	Νο	 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator
threeDSAcctAuthTimestamp	Text(8)	No	 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator Date and time in UTC of the cardholder
threeDSAcctAuthTimestamp	Text(8)	No	 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication.
threeDSAcctAuthTimestamp	Text(8)	No	 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD
			 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD e.g. "20190401"
			 merchant system using issuer credentials 05 = Login to the cardholder account at the merchant system using third-party authentication 06 = Login to the cardholder account at the merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD

	* Only provide when de-tokenized happened
	"T" - The card info is de-tokenized from pay
	token

Redirect URL (successUrl, failUrl and cancelUrl) Output			
Ref	Text	Merchant's Order Reference Number (For display	
		purpose only. DO NOT use this URL to update your	
		system. Please use DataFeed for this purpose.)	

Example of Client Post Method (Source Code)

The following is an example of integration of shopping cart routine with the payment routine of PesoPay PayGate in HTML. It is noteworthy that the portion in bold typeface as follows is mandatory for successful integration.

In the following sample form, hidden fields are used to hold the values:

```
. . .
<form name="payFormCcard" method="post" action="
        https://test.pesopay.com/b2cDemo/eng/payment/payForm.jsp">
<input type="hidden" name="merchantId" value="1">
<input type="hidden" name="amount" value="3000" >
<input type="hidden" name="orderRef" value="00000000014">
<input type="hidden" name="currCode" value="344" >
<input type="hidden" name="mpsMode" value="NIL" >
<input type="hidden" name="successUrl"
        value="http://www.yourdomain.com/Success.html">
<input type="hidden" name="failUrl" value="http://www.yourdomain.com/Fail.html">
<input type="hidden" name="cancelUrl"
value="http://www.yourdomain.com/Cancel.html">
<input type="hidden" name="payType" value="N">
<input type="hidden" name="lang" value="E">
<input type="hidden" name="payMethod" value="CC">
<input type="hidden" name="secureHash"
        value="44f3760c201d3688440f62497736bfa2aadd1bc0">
<input type="submit" name="submit">
</form>
. . .
```

Kick Off

After the integration has been completed, it is ready to launch your e-commerce web to serve your customers. Please copy the following **TESTING URL** for client post method:

https://test.pesopay.com/b2cDemo/eng/payment/payForm.jsp

Please copy the following **PRODUCTION URL** for client post method:

https://www.pesopay.com/b2c2/eng/payment/payForm.jsp

2.2 Direct Client Side Connection

This method is used for the merchant if they want to capture the credit card information from their web page instead of using our standard payment page. The requirement of using this method is to install a SSL Certificate to your domain in order to protect your customers' credit card information.

Moreover, if the credit card used by the customer is an enrolled 3-D Secure card, the customer will be asked for providing a static password or one-time password to verify the payer identity. 3-D Secure is a credit card authorization program implemented by VISA with brand named "Verified By VISA", MasterCard with brand named "MasterCard SecureCode", JCB with brand named "J/Secure" and AMEX with brand named "AMEX SafeKey" to reduce fraudulent purchases by verifying purchaser identity during online transactions. PesoPay will assist to carry out this process and the customer will observe the 3D processing pages by our PesoPay shown as the later section.

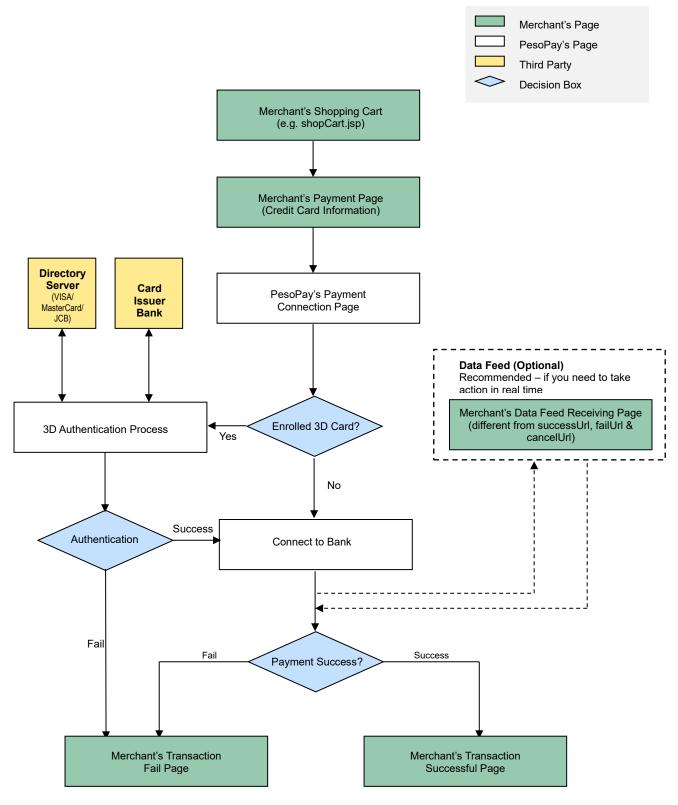

As the 3D protocol is standardized for all brand types, including Verified By VISA, MasterCard SecureCode, JCB J/Secure and AMEX SafeKey. In this document, we use the case of Verified By VISA as an example to show the flow in detail.

For merchant who chooses this method of connection, 128-bit SSL sever certificate must be installed for data encryption. The system does not accept non-encrypted data.

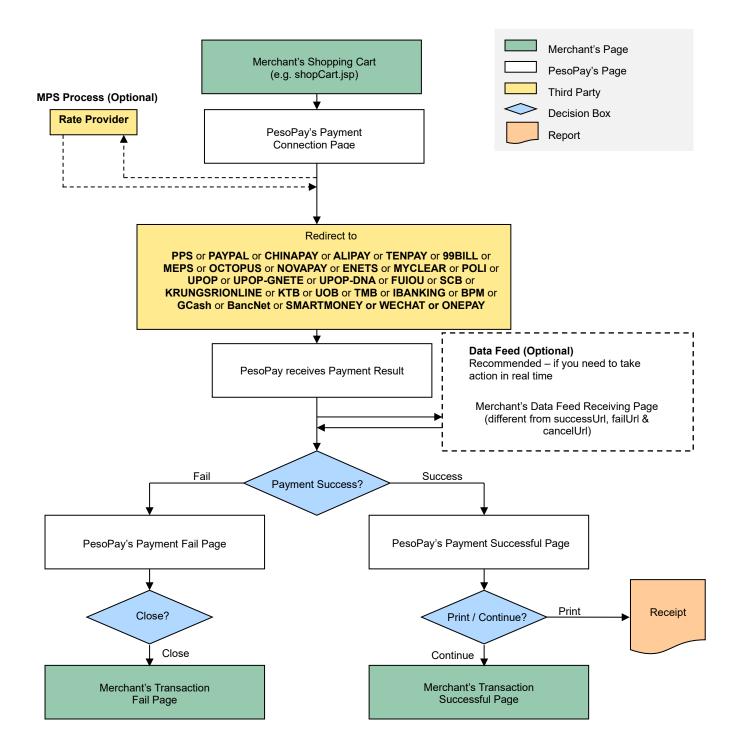

PesoPay use Extended Validation (EV) SSL Certificate to ensure your system function properly, please check your certificate store can recognize VeriSign intermediate CA certificate - Secure Site Pro/Managed PKI for SSL Premium with EV Certificates. If not, you are required to install the VeriSign intermediate CA certificate in your certificate store.

Please download the primary and secondary VeriSign EV SSL Intermediate CA certificates from the following link then import the 2 certificates into the keystore of your environment. http://www.verisign.com/support/verisign-intermediate-ca/extended-validation-pro/index.html (Please be reminded that you should choose the option "Issued After May 17th, 2009")

Other Payment Flow

Non-3D transaction

Your client's browser will be redirected from your site to our payment page and then we will redirect the page to your successful/fail page upon completed the transaction.

3D transaction

As 3D Authentication require your customers to enter the password of their cards, your clients' browser will be redirected to a 3D notification web page in order to notify your customers that they need to complete the 3D Authentication by entering the password in the pop-up window. Below are some sample pages for the case of Verified By VISA.

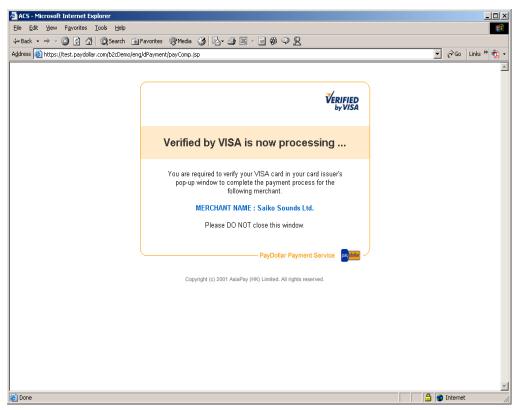

Figure 1.1 Sample notification page

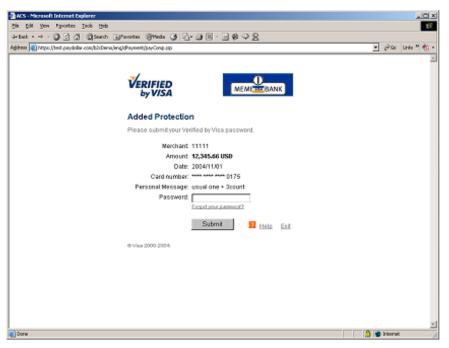

Figure 1.2 Sample issuing bank verification page

After the authentication process, the authentication result will forward to our system and the transaction process will be further continued by our acquiring bank according to the authentication result.

Integration Procedures

To connect to our system, you need to post the required parameters to our payment page URL and then get back the result by using data feed.

Definition of Parameters in the Integration Page

In the targeted page of integration, in which **sum of purchase** has been generated, the following fields (hidden or text) should be added:

Parameters	Data Type	Descriptions			
Re	quired Parameter (v	vith UTF-8 Encoding) for	connect to o	our payment	t page
orderRef	Text (35)	Merchant's Order Reference Number			
amount	Number (12,2)	The total amount you want to charge the customer (up to 2 decimal place			r (up to 2 decimal place)
		Remark:			
		mpsMode = MCP, the	amount shou	ld be calcula	ted in base currency.
currCode	Text (3)	The currency of the pay	ment:		
		"344" – HKD	"840" – US	D	"702" – SGD
		"156" – CNY (RMB)	"392" – JP`	Y	"901" – TWD
		"036" – AUD	"978" – EU	R	"826" – GBP
		"124" – CAD	"446" – MC)P	"608" – PHP
		"764" – THB	"458" – MY	′R	"360" – IDR
		"410" – KRW	"682" – SA	R	"554" – NZD
		"784" – AED	"096" – BN	D	"704" – VND
		"356" – INR Remark:			
		mpsMode = MCP, the	currCode valu	e should be	in base currency.
lang	Text (1)	The language of the pay	ment page :		
		"E" – English		"C" – Trad	litional Chinese
		"X" – Simplified Chines	e .	"J" – Japanese	
		"T" – Thai	"F"		ch
		"G" – German		"R" – Russian	
		"S" – Spanish		"V" – Vietr	namese

billingStreet2	Text(40)	Address of customer ,only mandatory if address exceed 40				
billingCity	Text(50)	City				
billingState	Text(2)	Mandatory if customer's country is USA or Canada				
billingPostalCode	Text(10)	Mandatory if customer's country is USA or Canada				
billingCountry	Text(2)	Eg.HK				
billingEmail	Text(255)	Email address				
custIPAddress	Text(15)	192.168.180.100				
Optional Parameter for connect to our payment page						
remark	Text (50)	An additional remark field that will appear in the confirmation email and				
		transaction detail report to help you to refer the order				
oriCountry	Number(3)	Origin Country Code				
		Example:				
		344 – "HK" 840 – "US"				
destCountry	Number(3)	Destination Country Code				
		Example:				
		344 – "HK" 840 – "US"				
secureHash	Text (40)	Secure hash is used to authenticate the integrity of the transaction				
		information and the identity of the merchant. It is calculated by hashing the				
		combination of various transaction parameters and the Secure Hash Secret.				
		*Applies to merchants who registered this function only. For more				
time out Value	Number	information, please refer to section 4.				
timeoutValue	Number	Timeout Value in second, only for OCTOPUS payment and ranged 180 and				
		7200				

novMode	Toyt(2)	Doumont Mode
payMode	Text(2)	Payment Mode
		"EC" - Electronic Commerce (Default)
		"MO" - Mail Order
	- ((00)	"RC" - Recurring
orderPhoneNo	Text(30)	Phone Number of order
		Parameter for Multi Currency Pricing (MCP)
mpsMode	Text(3)	The Multi-Currency Processing Service (MPS) Mode:
		"MCP" – Enable MPS with 'Multi Currency Pricing'
		For merchant who applied MPS function
multiRateID	Text (12)	Unique Rate ID
		*Returned from API function "MCPMultiRateEnquiry"
mpsExRate	Number (10,4)	Exchange rate between the merchant's base currency and the
		foreign currency.
		*Returned from API function "MCPMultiRateEnquiry"
foreignCurrCode	Text (3)	Foreign currency code
foreignAmount	Number (12,2)	Calculated foreign amount
		*The foreign amount should be converted from a base amount
		with minimum value HKD10 / MOP10 to avoid tolerance check
		failure.

Parameters for Supporting 3DS 2.0

The following are the parameters especially for 3DS 2.0. Merchant shall fulfill the parameters requirement to start using 3DS 2.0. The parameters are case sensitive and should be in UTF-8 encoding.

Parameters	Data Type	Mandatory	Descriptions
	Basic F	Parameters	
threeDSTransType	Text (2)	No	Transaction type. Select the most suitable one. "01" – Goods/ Service Purchase
			* Default value if threeDSTransType not provided. "03" – Check Acceptance "10" – Account Funding
			"11" – Quasi-Cash Transaction"28" – Prepaid Activation and Load
threeDSCustomerEmail	Text (254)	No	The customer's email address * Strongly suggest to provide if available. Shall meet requirements of Section 3.4 of IETF RFC 5322.
threeDSMobilePhoneCountryCode	Text (3)	No	Customer's mobile phone number country code. Provide if available. If "threeDSMobilePhoneCountryCode" is provided, "threeDSMobilePhoneNumber" should also be provided. e.g. "852" – Hong Kong
threeDSMobilePhoneNumber	Text (15)	No	Customer's mobile phone number. Provide if available. If "threeDSMobilePhoneNumber" is provided, "threeDSMobilePhoneCountryCode" should also be provided.
threeDSHomePhoneCountryCode	Text (3)	No	Customer's home phone number country code. Provide if available. If "threeDSHomePhoneCountryCode" is provided, "threeDSHomePhoneNumber" should also be provided.

			e.g. "852" – Hong Kong
threeDSHomePhoneNumber	Text (15)	No	Customer's home phone number. Provide if available. If "threeDSHomePhoneNumber" is provided, "threeDSHomePhoneCountryCode" should also be provided.
threeDSWorkPhoneCountryCode	Text (3)	No	Customer's work phone number country code. Provide if available. If "threeDSWorkPhoneCountryCode" is provided, "threeDSWorkPhoneNumber" should also be provided. e.g. "852" – Hong Kong
threeDSWorkPhoneNumber	Text (15)	No	Customer's work phone number. Provide if available. If "threeDSWorkPhoneNumber" is provided, "threeDSWorkPhoneCountryCode" should also be provided.
threeDSIsFirstTimeItemOrder	Text (1)	No	Flag to show if the customer is re-ordering the item / product. i.e. purchasing the same item / product Provide only if the payment related to purchase item / product. "T" – It is the first time the customer purchases this item / product. "F" – It is the NOT the first time the customer purchases the item / product, it is re-ordering.
threeDSChallengePreference	Text(2)	No	Indicates whether a challenge is requested for this transaction. "01" – No preference * Default value if threeDSChallengePreference not provided. "02" – No challenge requested * "03" – Challenge requested (Merchant preference) "04" – Challenge requested (Mandate) "05" – No challenge requested (transactional risk analysis is already performed) * "06" – No challenge requested (Data share only)*

			 "07" – No challenge requested (strong consumer authentication is already performed) * "08" – No challenge requested (utilise whitelist exemption if no challenge required) * "09" – Challenge requested (whitelist prompt requested if challenge required) ** If "No challenge requested" options are selected, the chargeback liability shift to merchant.
			s a recurring / installment payment)
threeDSRecurringFrequency	Text (4)	Yes (Only for recurring / installment payment)	Minimum number of days between payment. e.g. "30" – 30 days between payments.
threeDSRecurringExpiry	Text (8)	Yes (Only for recurring / installment payment)	Date after which no further payment shall be performed. Format: YYYYMMDD e.g. "20190401"
Billing Address Re	elated (Provid	e only if billing	g address is available)
threeDSBillingCountryCode	Text (3)	Yes (Only if billing address is available)	Payment cardholder billing country. Shall be the ISO 3166-1 numeric three-digit country code. e.g. "344" – Hong Kong, "840" – US
threeDSBillingState	Text (3)	No	Payment cardholder billing state Should be the country subdivision code defined in ISO 3166-2. Provide if available, as some countries do not have subdivision code. e.g. "PE" – Prince Edward Island of California
threeDSBillingCity	Text (50)	Yes (Only if billing address is available)	Payment cardholder billing city e.g. "Hong Kong"
threeDSBillingLine1	Text (50)	Yes (Only if billing address is	Payment cardholder billing address line 1

		available)	
	Text (50)	No	Payment cardholder billing address line 2
threeDSBillingLine2	Text (50)	INO	Provide if available
threeDSBillingLine3	Text (50)	No	Payment cardholder billing address line 3 Provide if available
threeDSBillingPostalCode	Text (16)	No	Payment cardholder billing postal code
threeDSBinngFostarcoue	1ext (10)	INU	Provide if available
Shinning / Delivery Related	(Provide only	v if the navme	nt requires shipping / delivery)
threeDSDeliveryTime	Text (2)	No	The delivering time for this purchase.
	10,11 (2)	NO	"01" – Electronic Delivery
			"02" – Same day shipping
			"03" – Overnight shipping
			"04" – Two-day or more shipping
threeDSDeliveryEmail	Text (254)	No	The email recipient of the purchased product.
······································			Provide only if the purchased product is using
			electronic delivery.
threeDSShippingDetails	Text (2)	No	Shipping details / type.
			Select the most suitable one.
			"01" – Ship to cardholder's billing address
			"02" – Ship to another verified address stored in
			merchant
			"03" – Ship to address that is different than the
			cardholder's billing address
			"04" – Ship to Store / Pick-up at local store (Store
			address shall be populated in shipping address
			fields)
			"05" – Digital goods (includes online services,
			electronic gift cards and redemption codes)
			"06" – Travel and Event tickets, not shipped
			"07" – Other (for example, Gaming, digital
			services not shipped, e-media subscriptions,
			etc.)
		No	Shipping / delivery country.
			Shall be the ISO 3166-1 numeric three-digit
			country code.
threeDSShippingCountryCode	Text (3)		e.g. "344" – Hong Kong, "840" – US
		No	Shipping / delivery state
threeDSShippingState	Text (3)		Should be the country subdivision code defined

			in ISO 3166-2
			e.g. "PE" – Prince Edward Island of California
threeDSShippingCity	Text (50)	No	Shipping / delivery city.
			e.g. "Hong Kong"
threeDSShippingLine1	Text (50)	No	Shipping / delivery address line 1
threeDSShippingLine2	Text (50)	No	Shipping / delivery address line 2
			Provide (if available).
threeDSShippingLine3	Text (50)	No	Shipping / delivery address line 3
			Provide (if available).
threeDSShippingPostalCode	Text (16)	No	Shipping / delivery postal code
			Provide (if available).
threeDSIsAddrMatch	Text (1)	No	Flag for comparing the billing address and
			shipping address.
			Provide (if available).
			"T" – Shipping address matches billing address
			"F" – Shipping address NOT match billing
			address
Gift Card / Prepaid Card Purchase Re	lated (Provid	e only if the p	urchase related to gift card / prepaid card)
threeDSGiftCardAmount	Text (15)	No	Gift card / prepaid card purchase amount.
threeDSGiftCardCurr	Text (3)	No	Gift card / prepaid card purchase currency.
			ISO 4217 three-digit currency code.
			e.g. "344" – HKD
threeDSGiftCardCount	Text (2)	No	Number of gift card / prepaid card purchasing.
			e.g. "12" – Purchasing 12 gift cards
Pre-Order Purchase Rel	ated (Provide	only if the pay	yment is related to Pre-Order)
threeDSPreOrderReason	Text (2)	No	The pre-order reasons.
			"01" – The pre-order is due to merchant
			availability, i.e. the purchasing product is not
			available due to the insufficient stock in the
			merchant.
			"02" – The pre-order is for future release product,
			i.e. the purchasing product is going to be
			released on future date.
threeDSPreOrderReadyDate	Text (8)	No	The expected ready date of the pre-order.
			Format: YYYYMMDD
			e.g. "20190401"
Account Info Relate	d (Provide on	ly if there is u	ser account in merchant)

threeDSAcctCreateDate	Text(8)	No	Date that the cardholder opened the account. Format: YYYYMMDD e.g. "20190401"
threeDSAcctAgeInd	Text(2)	No	Length of time that the cardholder has had the account. • 01 = No account (guest check-out) • 02 = Created during this transaction • 03 = Less than 30 days • 04 = 30–60 days • 05 = More than 60 days
threeDSAcctLastChangeDate	Text(8)	No	Date that the cardholder's account was last changed, including Billing or Shipping address, new payment account, or new user(s) added. Format: YYYYMMDD e.g. "20190401"
threeDSAcctLastChangeInd	Text(2)	No	Length of time since the cardholder's account information was last changed, including Billing or Shipping address, new payment account, or new user(s) added. • 01 = Changed during this transaction • 02 = Less than 30 days • 03 = 30–60 days • 04 = More than 60 days
threeDSAcctPwChangeDate	Text(8)	No	Date that cardholder's account had a password change or account reset. Format: YYYYMMDD e.g. "20190401"
threeDSAcctPwChangeInd	Text(2)	No	Indicates the length of time since the cardholder's account had a password change or account reset. • 01 = No change • 02 = Changed during this transaction • 03 = Less than 30 days • 04 = 30-60 days • 05 = More than 60 days
threeDSAcctPurchaseCount	Text(4)	No	Number of purchases with this cardholder account during the previous six months.

			e.g. "13" – Purchased 13 times during the previous six months
threeDSAcctCardProvisionAttempt	Text(3)	No	Number of Add Card attempts in the last 24 hours. e.g. "2" – Tried add card 2 times
threeDSAcctNumTransDay	Text(3)	No	Number of transactions (successful and abandoned) for this cardholder account across all payment accounts in the previous 24 hours. e.g. "2" – Processed 2 transactions
threeDSAcctNumTransYear	Text(3)	No	Number of transactions (successful and abandoned) for this cardholder account across all payment accounts in the previous year. e.g. "10" – Processed 10 transactions
threeDSAcctPaymentAcctDate	Text(8)	No	Date that the payment account was enrolled in the cardholder's account. Format: YYYYMMDD e.g. "20190401"
threeDSAcctPaymentAcctInd	Text(2)	No	Indicates the length of time that the payment account was enrolled in the cardholder's account. • 01 = No account (guest check-out) • 02 = During this transaction • 03 = Less than 30 days • 04 = 30-60 days • 05 = More than 60 days
threeDSAcctShippingAddrLastChangeDate	Text(8)	No	Date when the shipping address used for this transaction was first used. Format: YYYYMMDD e.g. "20190401"
threeDSAcctShippingAddrLastChangeInd	Text(2)	No	Indicates when the shipping address used for this transaction was first used • 01 = This transaction • 02 = Less than 30 days • 03 = 30-60 days • 04 = More than 60 days
threeDSAcctIsShippingAcctNameSame	Text(1)	No	Indicates if the Cardholder Name on the account is identical to the shipping Name used for this transaction.

			"T" – Account name identical to shipping name
			"F" – Account name different than shipping name
threeDSAcctIsSuspiciousAcct	Text(1)	No	Indicates whether has experienced suspicious
			activity (including previous fraud) on the
			cardholder account.
			"T" – Suspicious activity has been observed
			"F" - No suspicious activity has been observed
Account Authentication Info	o Related (Pr	ovide only if	there is user account in merchant)
threeDSAcctAuthMethod	Text(2)	No	Mechanism used by the Cardholder to
			authenticate.
			• 01 = No authentication occurred (i.e. cardholder
			"logged in" as guest)
			• 02 = Login to the cardholder account at the
			merchant system using merchant's own
			credentials
			• 03 = Login to the cardholder account at the
			merchant system using federated ID
			• 04 = Login to the cardholder account at the
			merchant system using issuer credentials
			• 05 = Login to the cardholder account at the
			merchant system using third-party authentication
			 06 = Login to the cardholder account at the
			06 = Login to the cardholder account at the merchant system using EIDO Authenticator
threeDSAcctAuthTimestamp	Taxt(8)	No	merchant system using FIDO Authenticator
threeDSAcctAuthTimestamp	Text(8)	No	merchant system using FIDO Authenticator Date and time in UTC of the cardholder
threeDSAcctAuthTimestamp	Text(8)	No	merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication.
threeDSAcctAuthTimestamp	Text(8)	No	merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD
			merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD e.g. "20190401"
Pay Token Related (Pro	vide only if th	ne card info i	merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD e.g. "20190401" s de-tokenized from pay token)
			merchant system using FIDO Authenticator Date and time in UTC of the cardholder authentication. Format: YYYYMMDD e.g. "20190401" s de-tokenized from pay token) Indicates that the transaction was de-tokenized.

Kick Off

After the integration has been completed, it is ready to launch your e-commerce web to serve your customers. Please copy the following **TESTING URL** for client post method:

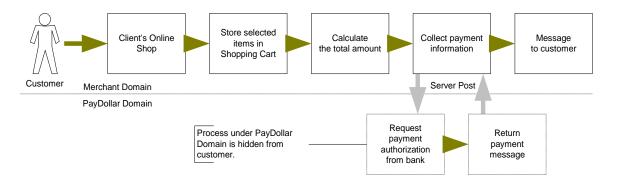

https://test.pesopay.com/b2cDemo/eng/dPayment/payComp.jsp

Please copy the following **PRODUCTION URL** for client post method:

https://www.pesopay.com/b2c2/eng/dPayment/payComp.jsp

2.3 Server Side Direct Connection

This connection method is for merchant to request payment authorization from bank directly through PesoPay PayGate system and subject to approval of acquiring bank. For example, merchant's IVR system or mobile application can directly integrate to us. And in this connection, merchants need to build their own payment information collection page to collect payment information, such as credit card number, expire data, holder's name and etc. Then, payment information has to be sent to a defined URL provided by the acquiring bank. Customer of the merchant, therefore, will not see any bank's payment page.

For merchant who chooses this method of connection, 128-bit SSL cert must be installed for data encryption. The system does not accept non-encrypted data.

PesoPay uses Extended Validation (EV) SSL Certificate. To ensure your system function properly, please check your certificate store can recognize VeriSign intermediate CA certificate - Secure Site Pro/Managed PKI for SSL Premium with EV Certificates. If not, you are required to install the VeriSign intermediate CA certificate in your certificate store.

Please download the primary and secondary VeriSign EV SSL Intermediate CA certificates from the following link then import the 2 certificates into the keystore of your environment. http://www.verisign.com/support/verisign-intermediate-ca/extended-validation-pro/index.html (Please be reminded that you should choose the option "Issued After May 17th, 2009")

We use Server Side Direct Connection for App 2 App integration and wallet payment direct integration. For the detail, please reference with "Integration Guide (Wallet Direct Connection)"

Definition of Parameters in the Integration Page

The following are the parameters for integration. PesoPay PayGate is case sensitive. Make sure the typeface is correct. When a transaction is finish, the system will return customer a payment message on the page created by merchant.

Parameters	Data Type	Descriptions		
Requir	ed Parameter (wi	th UTF-8 Encoding) for con	nect to our payment i	interface
orderRef	Text (35)	Merchant's Order Reference Number		
amount	Number (12,2)	Total amount your want to charge the customer [Up to 2 decimal place] Remark: mpsMode = MCP, the amount should be calculated in base currency.		
currCode	Text (3)	The currency of the payment: "344" – HKD "840" – USD "702" – SGD "156" – CNY (RMB) "392" – JPY "901" – TWD "036" – AUD "978" – EUR "826" – GBP "124" – CAD "446" – MOP "608" – PHP "764" – THB "458" – MYR "360" – IDR "410" – KRW "682" – SAR "554" – NZD "784" – AED "096" – BND "704" – VND "356" – INR Kemark: mpsMode = MCP, the currCode value should be in base currency.		
lang	Text (1)	The language of the payment page : "E" - English

Parameters for Supporting 3DS 2.0

The following are the parameters especially for 3DS 2.0. Merchant shall fulfill the parameters requirement to start using 3DS 2.0. The parameters are case sensitive and should be in UTF-8 encoding.

Parameters	Data Type	Mandatory	Descriptions	
Basic Parameters				
threeDSVersion	Text (10)	No	Indicate the 3DS Version if 3D-Secure is processed in this	
			payment.	
			* Should be provided if "vbvTransaction" is "T".	
			"1.0" – Using 3DS 1.0	
			"2.1.0" / "2.2.0" - Using 3DS 2.0 (depends on the actual	
			message version used in 3DS 2.0 message)	
threeDSCustomerIP	Text (45)	No	The customer incoming IP in IPv4 / IPv6 standard.	
			* Suggest to provide for all transactions, if available.	
			e.g. "1.12.123.255" /	
			"2011:0db8:85a3:0101:0101:8a2e:0370:7334"	
threeDSAresTransStatus	Text (1)	No	The "transStatus" returned in Authentication Response.	
threeDSDsTransId	Text (36)	No (Mandatory if	If using 3DS 2.0, provide the DS Transaction ID, if	
		using 3DS 2.0)	available.	
threeDSServerTransId	Text (36)	No	If using 3DS 2.0, provide the 3DS Server Transaction ID,	
			if available.	
threeDSAcsTransId	Text (36)	No	If using 3DS 2.0, provide the ACS Transaction ID, if	
			available.	
threeDSSdkTransId	Text (36)	No	If using 3DS 2.0, provide the SDK Transaction ID, if available.	

Return Parameter			
src	Text	Return bank host status code	
prc	Text	Return bank host status code	
Ord	Text	Bank Reference Number	
Holder	Text	The Holder Name of the Payment Account	
successcode	Number	Transaction Status:	
		0 – Transaction succeeded	
		1 – Transaction Failure	
Ref	Text	Merchant's Order Reference Number	

PayRef	Number	PesoPay Payment Reference Number
Amt	Number (12,2)	Transaction Amount
Cur	Number (3)	Transaction Currency i.e. "344" - HKD
AuthId	Text	Approval Code
TxTime	Text (YYYY- MM-DD HH:MI:SS.0)	Transaction Time
errMsg	Text	Error Message
encryptedEmvResponse	Text	EMV Data Response for EMV transaction only. Initialization vector IV(16) + Encrypted EMV Response Data

All the return parameters will be concatenated as in html request format by separate with a.

Sample return string:

successcode=0&Ref=Test&PayRef=4780&Amt=1.0&Cur=344&prc=0&src=0&Ord=6697090& Holder=edward&AuthId=123456&TxTime=2003-10-07 17:48:02.0&errMsg=Transaction completed

Example of Source Code

As different type of programming language have different syntax, so we just propose the method to connect to our payment page. To connect, we suggest you to use server side posting:

Sample code for server post by using java:

```
// Set up the post data
String postData =
"merchantId=1&orderRef=test&amount=1&currCode=344&pMethod=VISA&epMonth=01&epYear=20
02&cardNo=4123412341234123&cardholder=Edward&remark=test";
// Post to payment page
strResult = ServerPost.post(postData,
        https://www.pesopay.com/b2c2/eng/directPay/payComp.jsp );
// Extract the payment status from strResult
. . .
// Finish
public class ServerPost
{
      static public String post( String ip postData, String ip pageUrl)
      {
            try
             {
                   String strResult = "";
                   URL url = new URL(ip pageUrl);
                   URLConnection con = url.openConnection(); //from secure site
                   if (con instanceof com.sun.net.ssl.HttpsURLConnection) {
                      ((com.sun.net.ssl.HttpsURLConnection)con).setSSLSocketFactory
                                 (SSLSocketFactory)SSLSocketFactory.getDefault());
                   }
                   con.setDoOutput(true);
                   con.setDoInput(true);
                   // Set request headers for content type and length
                   con.setRequestProperty(
                         "Content-type",
                         "application/x-www-form-urlencoded");
                   con.setRequestProperty(
                         "Content-length",
                         String.valueOf(ip postData.length()));
                   // Issue the POST request
                   OutputStream outStream = con.getOutputStream();
                   outStream.write(ip postData.getBytes());
                   outStream.flush();
                   // Read the response
                   InputStream inStream = con.getInputStream();
```

```
while (true)
              {
                    int c = inStream.read();
                    if (c == -1)
                           break;
                     strResult = strResult + String.valueOf((char)c);
              }
              inStream.close();
             outStream.close();
              return strResult;
       }
       catch (Exception e)
       {
              System.out.print(e.toString());
             return null;
       }
}
```

Kick Off

}

After the integration has been completed, it is ready to launch your e-commerce web to serve your customers. Please copy the following **TESTING URL** for Direct Connect Server Post method:

https://test.pesopay.com/b2cDemo/eng/directPay/payComp.jsp

Please copy the following **PRODUCTION URL** for Direct Connect Server Post method:

https://www.pesopay.com/b2c2/eng/directPay/payComp.jsp

3 Data Feed handling

To use data feed function, merchant has to create a data feed page and inform PesoPay about the location of your page (e.g. http://www.yourdomain.com/datafeed.jsp). Merchant can enable or disable this function in the merchant administration site.

Definition of Parameters in the output of Data Feed

The data feed page must meet the following requirement:

- Print '**OK**' in HTML when data captured (ACK message)

- Make Sure to Print 'OK' for acknowledge to our system first then do the rest of your system process, if something wrong with your system process (i.e. download photo, ring tone problem) you can send a void request to our system, for more details please refer to our API guide and contact our technical staff.

Please note that the system only supports either port 80 (HTTP) or 443 (HTTPS) for the data feed page location. And make sure the data feed page location is externally accessible, so that our server can call the data feed page.

* Since the system will read from the data feed page for the word 'OK' to determine whether the (data feed) message is delivered or not, if this word does not return successfully, the system will assume the data feed is lost.

Data Feed Setup

Merchant can enable or disable the data feed function in the merchant administration site > Profile > Payment Options.

Sample Data Feed Page

The following is a sample data feed page in JSP.

```
<%@ page language="java" %>
<%
    String successCode = request.getParameter("successcode");
    String payRef = request.getParameter("PayRef");
    String Ref = request.getParameter("Ref");
    // Print out 'OK' to notify us you have received the payment result
    out.print("OK");
    if ( successCode.equals("0") )
    {
         // Transaction Accepted
        // *** Add the Security Control here, to check the currency, amount with
the
        // *** merchant's order reference from your database, if the order exist
then
        // *** accepted otherwise rejected the transaction.
        // Update your database for Transaction Accepted and send email or notify
your
        // customer.
         . . . .
         // In case if your database or your system got problem, you can send a
         void transaction request. See API guide for more details
    }
    else
    {
         // Transaction Rejected
         // Update your database for Transaction Rejected
         . . . . .
    }
응>
```

The following is a sample data feed page in ASP.

```
<%@ Language = "VBScript" %>
<응
    Dim successCode
    Dim payRef
    Dim Ref
    successCode = Request.Form("successcode")
    payRef = Request.Form("PayRef")
    Ref = Request.Form("Ref")
     ' Print out 'OK' to notify us you have received the payment result
    Response.write("OK")
     If successCode = "0" Then
          ' Transaction Accepted
          ' *** Add the Security Control here, to check the currency, amount with the
          ' *** merchant's order reference from your database, if the order exist then
          ' *** accepted otherwise rejected the transaction.
          ' Update your database for Transaction Accepted and send email or notify your
          ' customer.
          . . . . .
          ' In case if your database or your system got problem, you can send a void
          ' transaction request. See API guide for more details
    Else
          ' Transaction Rejected
          ' Update your database for Transaction Rejected
          . . . . .
    End If
```

4 Transaction security by Secure Hash

Introduction

The purpose of Secure Hash is to enhance the transaction message communication security between merchant site and PesoPay. By employing this technology, the integrity of the information and the identity of the signatory can be authenticated with industry standard.

Basic flow of Secure Hash

- 1. For all transaction request send from merchant site to PesoPay, secure hash should be calculated and added to the transaction request to authenticate the integrity of the transaction information and the identity of the merchant.
- 2. The secure hash is calculated by hashing the following parameters using SHA-1 or SHA-256, a cryptographic hash function of industry standard.
 - Merchant ID
 - Merchant Reference Number
 - Currency Code
 - Amount
 - Payment Type
 - Secure Hash Secret Assigned by PesoPay to merchant.
- 3. When the transaction request is received, PesoPay verifies the transaction by comparing the secure hash submitted by merchant and the secure hash re-calculated by other input parameters. If both values are the same, existing payment flow will follows. Or else, the payment request will be

dropped. PesoPay will send out an email to notify the merchant through the operation contact.

- 4. After the transaction is completed, PesoPay will send out datafeed to merchant site. A secure hash will also be calculated by hashing the following parameters using SHA-1 or SHA-256,
 - Src
 - Prc
 - Success Code
 - Merchant Reference Number
 - PesoPay Reference Number
 - Currency Code
 - Amount
 - Payer Authentication Status
 - Secure Hash Secret
- 5. After receiving the datafeed, merchant is suggested to verify the information by comparing the secure hash posted by PesoPay and the secure hash re-calculated by other response parameters. If the values doesn't matched, the datafeed may have been tampered within the redirection process and you are suggested to do further investigation before confirmation the order.

Client library provided by PesoPay

Client library is provided by PesoPay to facilitate the secure hash generation and verification process. It supports common programming language including Java, PHP, ASP, ASP.NET. The following function calls are supported.

Functions	Parameters	Descriptions
generateSecureHash	<u>Input</u>	Create a secure hash using the input
	- Merchant ID	parameters and Secure Hash Secret.
	- Merchant Reference Number	
	- Currency Code	(The result secure hash should be
	- Amount	included in the payment parameter
	- Payment Type	send to PesoPay.)
	- Secure Hash Secret	
	Output	
	- Secure Hash String	
verifyDatafeed	<u>Input</u>	Verify the parameters passed from
	- Src	PesoPay using input parameters and
	- Prc	Secure Hash Secret.
	- Success Code	

-	Merchant Reference Number	(If the result of the output is true, it is
-	PesoPay Reference Number	verified that the result is sent from
-	Currency Code	PesoPay and it is safe to trust the
-	Amount	result.)
-	Payer Authentication Status	
-	Secure Hash Secret	
-	Secure Hash from PesoPay	
<u>Output</u>		
-	True/False	

*Please login to PesoPay Merchant Administration Tools and download client library with sample code under Support \rightarrow Developer Corner.

Generating and verifying Secure Hash manually

Merchant may also generate and verify secure hash manually, without using the client library provided by PesoPay. The following diagrams list out the exact algorithm,

Generate Secure Hash

Create the signing data string.
 Signing data string = Merchant ID + "|" + Merchant Reference + "|" + Currency Code + "|" + Amount + "|" + Payment Type + "|" + Secure Hash Secret

2. Secure Hash = SHA-1 or SHA-256 (Signing data string)

*SHA-1 is the original 160-bit hash function (default).

Example of Secure Hash Secret

gMAVIEGVpqHvxoNEqbrZRuBDFT1B0icW

Example of Signing data string

56100908|1280204670187|344|10|N|gMAVIEGVpqHvxoNEqbrZRuBDFT1B0icW

Example of Secure Hash

13068c0ef09139ea711d36bde16785a2d30b9a30

Verifying Secure Hash from PesoPay datafeed

- Create the verify data string.
 Verify data string = Src + "|" + Prc + "|" + Success Code + "|" + Merchant Reference Number + "|" + PesoPay Reference Number + "|" + Currency Code + "|" + Amount + "|" + Payer Authentication Status + "|" + Secure Hash Secret
- 2. Verify Secure Hash = SHA-1 / SHA-256 (Verify data string)
- 3. Extract the secure hash from PesoPay datafeed.
- 4. Compare the output from step 2 and step 3. If they are equals, return True, else return False.

*SHA-1 is the original 160-bit hash function. (default)

Enable Secure Hash function of your merchant account

- a) Please contact PesoPay Service Department (<u>service@pesopay.com</u>) to enable the Secure Hash function of your merchant account.
- b) You may retrieve the Secure Hash Secret of the merchant account by accessing to the Merchant Administration Interface, "Profile" → "Payment Information". The Secure Hash Secret must be kept safely for the function to be effective.
- c) The Secure Hash Secret will be changed every 2 years to enhance the level of security.
- d) Once this function is enabled, a valid Secure Hash should be included in all transaction requests.
 All transaction without valid Secure Hash will be dropped by PesoPay.
- e) You may download client library with sample code under,
 PesoPay Merchant Administration Tools → Support → Developer Corner.

5 Multi-Currency Processing Service

Introduction

PesoPay by Multi-Currency Processing Service (MPS) is an integrated e-payment transaction processing service that allows your online business of any size to securely accept real-time credit card payments from overseas cardholders and offer them the choice to pay for their goods and services in their billing currency, whilst merchants continue to be settled for transactions in their base currency.

Multi-Currency Processing Service (MPS) provides three different modes as below:

- Simple Currency Conversion (SCP)
- Multi-Currency Pricing (MCP)
- Dynamic Currency Conversion (DCC)

Multi-Currency Processing Service (MPS) facilitates merchant to connect to our network with great flexibility. Merchant can choose the following integration method.

- Client Post through Browser (e.g. Shopping Cart)

Definition:

"Foreign Currency" means those non-based currency for which the Program is available to merchant from time to time supported and advised by AsiaPay.

"**Base Currency**" means the currency in which the merchant is settled for payment transactions by its acquirer.

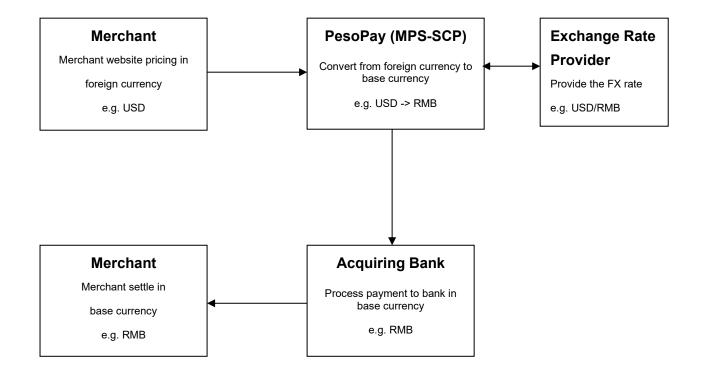

"Conversion Rate" means the foreign currency exchange rate derived by a recognized supplier.

Simple Currency Conversion (SCP)

Simple Currency Conversion (SCP) is a value added e-payment processing service that allows your online business to securely accept real-time credit card payments from overseas customers with **foreign currencies in pricing** while offering them to pay for goods and services in **your preferred currency.** And, your business can continue to collect settlement in base currency as usual.

Simple Currency Conversion (SCP) will convert the foreign currency that posted by merchant to the base currency of merchant according to the conversion rate obtained from our exchange rate provider. After that, the foreign amount, base amount and the exchange rate will be shown on the PesoPay's payment input page.

Multi Currency Pricing (MCP)

Multi-Currency Pricing (MCP) is a value added e-payment processing service that allows your online business to securely accept real-time credit card payments from overseas customers while offering them the choice to pay for goods and services in **merchant base currency** or **other worldwide currencies (e.g. USD)**. And, your business can continue to collect settlement in local currency as usual.

Multi-Currency Pricing (MCP) will translate the base currency that posted by merchant to the worldwide currency according to the conversion rate. After that, customer can select one of the currencies for payment.

MCP Calculation

PesoPay will provide an API to merchant to integrate with their web server. This MPS Exchange Rate Enquiry API is used for enquiry exchange rate and calculation of MCP foreign amount. The calculation of the MCP amounts will be based on the stored rates at PesoPay; the correct minor unit for that currency will provided.

Rounding

Rate response messages contain a margined foreign exchange rate with four decimal places. Merchant will use this rate to calculate the MCP amounts. Merchant will take account of the correct minor unit per currency when calculating the MCP amount. Round half up will be used for rounding.

- Example: Two minor unit currencies

For exchange rate 1HKD=0.0960EUR HKD 376 = EUR 36.10 (Before Rounding, EUR 36.096) For exchange rate 1HKD=0.1394CAD HKD 345 = CAD 48.09 (Before Rounding, CAD 48.093)

Example: Zero Minor unit currency
 For exchange rate 1HKD=132.3400KRW
 HKD 100 = KRW 13234

Rates Expiry

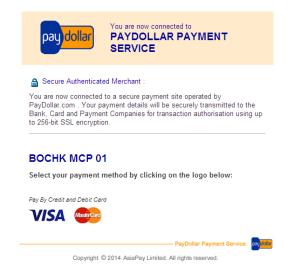

Rate response messages contain an expiry time. Rates are only valid prior to this expiry time. The transaction will be rejected by PesoPay if the MCP rates have expired. Therefore, merchant should make the rate enquiry every time in each new customer browsing session instead of storing the rate locally.

Tolerance Check

PesoPay has a rate tolerance check on every MCP transaction to make sure that all the MCP transaction only will be processed within an agreed tolerance level with bank of the latest margined exchange rates. The transaction will be rejected by PesoPay if the tolerance check fails.

Dynamic Currency Conversion (DCC)

Dynamic Currency Conversion (DCC) is a value added e-payment processing service that allows your online business to securely accept real-time credit card payments from overseas customers while offering them the choice to pay for goods and services in the **merchant base currency** or **cardholder's home currency**. This payment process allows the merchant to show the value of the transaction in the cardholder's home currency.

Dynamic Currency Conversion (DCC) will translate the base currency that posted by merchant to the cardholder's home currency according to the conversion rate. After that, customer can select one of the currencies for payment.

6 Functions of Merchant API

Introduction of API functions

There are totally four functions provided:

- Capture Authorized Payment
- Void Accepted Payment
- Request Refund Accepted Payment
- Query Payment Status

To connect to our system, you need to post the required parameters by HTML form posting to our merchant API web page and then get back the processing result from that page. You can implement it by server-side html post.

- URL of Testing Platform:

https://test.pesopay.com/b2cDemo/eng/merchant/api/orderApi.jsp

URL of Production Platform: https://www.pesopay.com/b2c2/eng/merchant/api/orderApi.jsp

Beside, a set of API login ID and password will be assigned to your merchant account for accessing this API function. And it can be obtained from us by sending a request email or directly contact us.

Capture Authorized Payment

The aim of this function is to capture the authorized payment.

Input /Return	Parameters (Required Fields are in Bold typeface) *Case Sensitive	Data Type	Expected Value	Descriptions	
Input	merchantld	Number		The merchant ID we pr	ovide

Sample source code of HTML server-side posting on Java

As different type of programming language have different syntax, so we just propose one method to connect to our merchant API page. To connect, we suggest you to use server side posting:

Sample code for serverpost by using java:

// SET UP THE POST DATA

```
String postData =
"merchantId=1&loginId=testing&password=pwd&payRef=123456&actionType=Capture&amount=
1&";
```

// POST TO PAYMENT PAGE

```
strResult = ServerPost.post(postData,
htts://test.pesopay.com/b2cDemo/eng/merchant/api/orderApi.jsp );
```

// EXTRACT THE PAYMENT STATUS FROM STRRESULT

```
.....
```

// FINISH

```
public class ServerPost
{
      static public String post( String ip postData, String ip pageUrl)
      {
            try
            {
                  String strResult = "";
                  URL url = new URL(ip pageUrl);
                  URLConnection con = url.openConnection(); //from secure site
                  if (con instanceof com.sun.net.ssl.HttpsURLConnection) {
                    ((com.sun.net.ssl.HttpsURLConnection)con).setSSLSocketFactory
                              ((SSLSocketFactory)SSLSocketFactory.getDefault());
                  }
                  con.setDoOutput(true);
                  con.setDoInput(true);
                  // Set request headers for content type and length
                  con.setRequestProperty(
                        "Content-type",
                        "application/x-www-form-urlencoded");
                  con.setRequestProperty(
```

}

```
"Content-length",
                    String.valueOf(ip postData.length()));
             // Issue the POST request
             OutputStream outStream = con.getOutputStream();
             outStream.write(ip postData.getBytes());
             outStream.flush();
             // Read the response
             InputStream inStream = con.getInputStream();
             while (true)
              {
                    int c = inStream.read();
                    if (c == -1)
                           break;
                    strResult = strResult + String.valueOf((char)c);
              }
             inStream.close();
             outStream.close();
             return strResult;
       }
      catch (Exception e)
       {
             System.out.print(e.toString());
             return null;
       }
}
```

7 Exceptional Transaction Handling

This section explains various scenarios of transactions, other than good and successful transactions that may occur.

A) Unsuccessful data feed

This may occur if

- 1. Data feed URL is wrongly set up; or
- 2. Connection between PesoPay and merchant server is lost; or
- 3. Server of either side cannot process data feed correctly.

Since the bank has already determined the transaction status, the transaction is completed. Merchant can confirm the status by

- 1. Log on to Merchant Administration and retrieve the corresponding transactions in Transaction Details Report; or
- 2. Query the transaction status by using Merchant API.

B) Unsuccessful redirection to successUrl / failUrl / cancelUrl

This may occur if

- 1. Wrong / invalid returned URLs are set in the integration; or
- 2. Connection between the customer and merchant server is lost; or
- 3. Customer's computer hangs / restarts / loses power.

Since the bank has already determined the transaction status, the transaction is completed. Merchants should educate the customer to contact the merchant and confirm the transaction status with them when such case happens.

C) Incomplete 3D authentication transactions by customer

This may occur if

- 1. The customer closes the browser when he / she is required to enter 3D authentication information at issuer bank webpage; or
- 2. The customer cannot access 3D authentication page of issuer bank due to various reasons, e.g. disabled cookies.

The transaction status remains "Pending_3D", and payer authentication status remains "P". In

PesoPay production, a schedule job is set up to change the status from "Pending_3D" to "Rejected" from time to time. The PRC / SRC pair is also updated to 3 / 9999. Data feed is also sent out in the schedule job for these unsuccessful transactions.

Sometimes customers may return to PesoPay payment page / merchant site by pressing the 'Back' button of the browser and try again. The same merchant reference number is used for these retry transactions. Thus merchants may receive multiple data feeds regarding transactions with the same merchant reference number, with one success transaction followed by failed transactions. Merchants can choose to ignore the fail transactions with the same merchant reference once a successful transaction has been processed.

D) Incomplete 99BILL / ALIPAY / CHINAPAY / PPS / TENPAY / SCB / BAY / KTB / UOB / TMB / BBL iBanking / UPOP / M2U / CIMBCLICK / WECHAT transactions by customer

This may occur if

- 1. The customer closes the browser when he / she is required to enter 99BILL / ALIPAY / CHINAPAY / PPS / TENPAY / WECHAT account information at respective site; or
- The customer cannot access 99BILL / ALIPAY / CHINAPAY / PPS / TENPAY / WECHAT / SCB / BAY / KTB / UOB / TMB / BBL iBanking / UPOP page due to various reasons, e.g. disabled cookies or 99BILL / ALIPAY / CHINAPAY / PPS / TENPAY / SCB / BAY / KTB / UOB / TMB / BBL iBanking / UPOP host is down.

The transaction status remains "Pending". In production environment a schedule job is set up in our servers to change the status from "Pending" to "Rejected" from time to time. Data feed is also sent out in the schedule job for these unsuccessful transactions.

Sometimes customers may return to PesoPay payment page by pressing the 'Back' button of the browser and try again. The same merchant reference number is used for these retry transactions.

Thus merchants may receive multiple data feeds regarding transactions with the same merchant reference number, with one success transaction followed by failed transactions. Merchants can choose to ignore the fail transactions with the same merchant reference once a successful transaction has been processed.

8 PaySDK iOS Mobile SDK

This section explains integration of PaySDK iOS SDK in merchant iOS mobile application. Merchant have to provide iOS App bundle ID and android application id to AsiaPay to apple PaySDK service. PaySDK will be sharing unique RSA Public key related to merchant.

A) SDK Integration Steps

SDK requirement

Swift Version: 4.0 and above iOS Version: 11.0 and above

SDK Configuration

Add AP_PaySDK.framework file into your project by adding the dependencies in Build Phases / Link Binary With Libraries :

add the "AP_PaySDK" framework

Embedded Binaries	
	AP_PaySDK.framework
	+

or

CocoaPods is a dependency manager for Cocoa projects. For usage and installation instructions, visit their website. To integrate PaySDK into your Xcode project using CocoaPods, specify it in your Podfile:

pod 'AP_PaySDK'

SDK Initialization

1. Create the paysdk.plist file in the app with the following attributes

RSA Public Key(**SDK_RSA_Publickey**) :- Here you need to specify the RSA Public Key without header and footer. The value will be provided when the merchant apply the SDK service.

e.g

8 < > 🛕 🛛 🔪 🖿)三(paysdk_plist) No 5	Selection 🛛 🕹 🕹
Кеу		Туре	W	alue
r Root		Dictionary	(1	1 itam)
SDK_RSA_PublicKey	00	String	OM	tilBijANBgkghkiG9w08AQEFAAOCAQBAMIIBCgKCAQEA3h0z7Ekyf9YLDJRzUxJSeFfAxjIW/8Kd8v+tKK/Tc+3KyOHADIV7NYtiGDyoH5dCApUGHrxaYb

NOTE:Naming of property file and its attributes must be same.

2. Import sdk into the class

import AP_PaySDK

Note - Due to the limitation of App Transport Security(ATS) on http in iOS9.0, we need to add exception for paydollar.com, xecure3d.com, pesopay.com, siampay.com, alipay.com, alipayobjects.com in info.list <key>NSAppTransportSecurity</key> <dict> <key>NSExceptionDomains</key> <dict> <key>pesopay.com</key> <dict> <key>NSIncludesSubdomains</key> <true/> <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key> <true/> <key>NSTemporaryExceptionMinimumTLSVersion</key> <string>TLSv1.0</string> <key>NSTemporaryExceptionRequiresForwardSecrecy</key> <false/> </dict> <key>xecure3d.com</key> <dict> <key>NSIncludesSubdomains</key> <true/> <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key> <true/> <key>NSTemporaryExceptionMinimumTLSVersion</key> <string>TLSv1.0</string> <key>NSTemporaryExceptionRequiresForwardSecrecy</key> <false/> </dict> <key>pesopay.com</key> <dict> <key>NSIncludesSubdomains</key>

<true/>
<key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key>
<true/>
<key>NSTemporaryExceptionMinimumTLSVersion</key>

<string>TLSv1.0</string>

```
Page 113
```

```
<key>NSTemporaryExceptionRequiresForwardSecrecy</key>
        <false/>
    </dict>
    <key>siampay.com</key>
    <dict>
        <key>NSIncludesSubdomains</key>
        <true/>
        <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key>
        <true/>
        <key>NSTemporaryExceptionMinimumTLSVersion</key>
        <string>TLSv1.0</string>
        <key>NSTemporaryExceptionRequiresForwardSecrecy</key>
        <false/>
    </dict>
    <key>alipay.com</key>
    <dict>
        <key>NSIncludesSubdomains</key>
        <true/>
        <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key>
        <true/>
        <key>NSTemporaryExceptionMinimumTLSVersion</key>
        <string>TLSv1.0</string>
        <key>NSTemporaryExceptionRequiresForwardSecrecy</key>
        <false/>
    </dict>
    <key>alipayobjects.com</key>
    <dict>
        <key>NSIncludesSubdomains</key>
        <true/>
        <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key>
        <true/>
        <key>NSTemporaryExceptionMinimumTLSVersion</key>
        <string>TLSv1.0</string>
        <key>NSTemporaryExceptionRequiresForwardSecrecy</key>
        <false/>
    </dict>
</dict>
```

```
</dict>
```

or merchant can disable ATS by

```
<key>NSAppTransportSecurity</key>
<dict>
<key>NSAllowsArbitraryLoads</key><true/>
</dict>
```

3. Add implementation of PaySDK protocol -

class ViewController: UIViewController , PaySDKDelegate

4. Instantiate PaySDK class

var paySDK = PaySDK.shared

5. Set paySDK delegate

paySDK.delegate = self

B) WebView Payment Call

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

```
channelType: PayChannel.WEBVIEW,
payGate: PayGate.PESOPAY,
envType: EnvType.SANDBOX,
merchantId: "1",
payType: payType.NORMAL_PAYMENT,
orderRef: "2018102409220001",
payMethod: "VISA",
lang: Language.ENGLISH,
currCode: Currency.HKD,
amount: 10,
remark: "",
extraData: [:])
```

Trigger the Payment:

Call the SDK to trigger the payment process. For WebView flow, it will display a In-App Webview for the payment.

paySDK.process()

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
```

}

WebView Sample:

ier 🗢 ancel	5:34 PM	7 💼 4	Carrier 🗢	3:49 PM
_	AR PAYMENT SERVIC	E	Cancel	OOLLAR PAYMENT SERVICE
		VISA		
est SDK			Test PDK	
ransaction Ar	mount : HKD 10.00			tps://test.paydollar.com se review your payment details

				Cancel OK
Su	Ibmit Cancel			Submit Cancel
F	Powered by paydollar.com			Powered by paydollar.com

C) Direct Payment Call

Prepare Payment Call:

Initialize the PayData class and card details then prepare the payment detail for the transaction.

```
payGate: PayGate.PESOPAY,
currCode: currencyCode.HKD,
payType: payType.NORMAL_PAYMENT,
orderRef: "2018102409220001",
payMethod: "VISA",
lang: Language.ENGLISH,
merchantId: "1",
remark: "",
extraData :[:])
paySDK. paymentDetails.cardDetails = CardDetails (
cardHolderName: "abc abc",
cardHolderName: "abc abc",
expMonth: "11",
expYear: "2011",
securityCode: "123")
```

Trigger the Payment:

Call the SDK to trigger the payment process. For WebView flow, it will display a In-App Webview for the payment.

paySDK.process()

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
```

}

D) Installment Payment

Prepare Payment Call:

For Installment Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters.

```
extraData: [
    "installment service " : "T",
```

```
"installment_period": 3,
"installOnly": "T"]
```

E) Schedule Pay

extraData: [

For Schedule Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters.

```
"appId" : "SP",
"appRef" : "2018102409220001",
"schType" : "Day",
"schStatus" : "Active",
"nSch" : "1",
"sMonth" : "4",
"sDay" : "26",
"sYear" : "2019",
"eMonth" : "",
"eDay" : "",
"eDay" : "",
"name" : "Name",
"email" : "kit@igears.com.hk"]
```

F) Member Pay

For New Member:

For Member Pay Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters. Add parameter addNewMember. If merchant making payment for first time then value should be true

```
extraData: [
```

```
"addNewMember": true,
"memberPay_service": "T",
"memberPay_memberId": "MPTEST_1",
"memberId": "MPTEST_1"]
```

For Old Member:

For Member Pay Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters. Add parameter addNewMember. If merchant making payment not for first time then value should be false and below will be extra parameters.

```
extraData: [
    "addNewMember": false,
    "memberPay_service": "T",
    "memberPay_memberId": "MPTEST_1",
    "memberId":"MPTEST_1",
    "token":"8de18f7b17fabe5bb682e792e319c0e411b528f58926"]
```

G) Promo Pay

For Promo Pay Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters.

```
extraData: [
    "promotion ": "T",
    "promotionCode ": "TEST1",
    "promotionRuleCode " : " TESTR25",
    "promotionOriginalAmt ":""]
```

H) Alipay Global Payment Call

Initialization Step:

1. Add URL Type in info .plist file

alisdkdemo					
	Identifier	alisdkdemo	URL Schemes	alisdkdemo	
No image	lcon	None	Role	Editor	
specified	*****	- (D)			
Additional url alicnsdk	type propertie	s (0)			
	Identifier	alicnsdk	URL Schemes	alicnsdk	
No image	lcon	None	Role	Editor	
specified					

2. In AppDelegate file add

```
var paySDK = PaySDKClass.shared
```

```
And
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
        paySDK.processOrder(url: url)
        return true;
}
```

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

```
channelType: PayChannel.DIRECT,
envType: EnvType.SANDBOX,
amount: 0.1,
payGate: PayGate.PESOPAY,
currCode: currencyCode.HKD,
payType: payType.NORMAL_PAYMENT,
orderRef: "2018102409220001",
payMethod: "ALIPAYAPP",
lang: Language.ENGLISH,
merchantId: "1",
remark: "test",
extraData : [:])
```

Trigger the Payment:

Call the SDK to trigger the payment process.

```
paySDK.process()
```

```
If app is installed on device then get reponse in AppDelegate openurl function
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
    paySDK.processOrder(url: url)
    return true;
```

```
}
```

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
}
```

I) Alipay HK Payment Call

Initialization Step:

1. Add URL Type in info .plist file

▼ URL Types (4)

	Identifier	alisdkdemo	URL Schemes	alisdkdemo	
No image	Icon	None	Role	Editor	
specified					

2. In AppDelegate file add

var paySDK = PaySDKClass.shared

And

```
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
    paySDK.processOrder(url: url)
    return true;
```

}

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

```
channelType: PayChannel.DIRECT,
envType: EnvType.SANDBOX,
amount: 0.1,
payGate: PayGate.PESOPAY,
currCode: currencyCode.HKD,
payType: payType.NORMAL_PAYMENT,
orderRef: "2018102409220001",
payMethod: "ALIPAYHKAPP",
lang: Language.ENGLISH,
merchantId: "1",
remark: "test",
extraData : [:])
```

Trigger the Payment:

Call the SDK to trigger the payment process.

paySDK.process()

If app is installed on device then get reponse in AppDelegate openurl function

```
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
    paySDK.processOrder(url: url)
    return true;
```

}

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
}
```

,

This method returns object of PayResult class.

J) Alipay China Payment Call

Initialization Step:

1. Add URL Type in info .plist file

alisdkdemo					
()	Identifier	alisdkdemo	URL Schemes	alisdkdemo	
No image	lcon	None	Role	Editor	
specified					
Additional url	type propertie	s (0)			
alicnsdk					
	Identifier	alicnsdk	URL Schemes	alicnsdk	
No image	lcon	None	Role	Editor	٢
					1 August 1

2. In AppDelegate file add

```
var paySDK = PaySDKClass.shared
```

And

```
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
    paySDK.processOrder(url: url)
    return true
}
```

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

```
channelType: PayChannel.DIRECT,
envType: EnvType.SANDBOX,
amount: 0.1,
payGate: PayGate.PESOPAY,
currCode: currencyCode.HKD,
payType: payType.NORMAL_PAYMENT,
orderRef: "2018102409220001",
payMethod: "ALIPAYCNAPP",
lang: Language.ENGLISH,
merchantId: "1",
remark: "test",
extraData : [:])
```

Trigger the Payment:

Call the SDK to trigger the payment process.

```
paySDK.process()
```

If app is installed on device then get reponse in AppDelegate openurl function

```
func application(_ app: UIApplication, open url: URL, options:
[UIApplication.OpenURLOptionsKey : Any] = [:]) -> Bool {
    paySDK.processOrder(url: url)
    return true;
```

}

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
}
```

K) WeChat Pay Payment Call

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

channelType: PayChannel.DIRECT, envType: EnvType.SANDBOX, amount: 0.1, payGate: PayGate.PESOPAY, currCode: currencyCode.HKD, payType: payType.NORMAL_PAYMENT, orderRef: "2018102409220001", payMethod: "WECHATAPP", lang: Language.ENGLISH, merchantId: "1", remark: "test", extraData : [:])

Trigger the Payment:

Call the SDK to trigger the payment process. paySDK.process()

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
}
```

L) 3DS 2.0 Payment Call

Prepare Payment Call: Initialize the PayData class and card details then prepare the payment detail for the transaction.

```
paySDK.paymentDetails = PayData(
```

channelType: PayChannel.DIRECT, envType: EnvType.SANDBOX, amount : "10", payGate: PayGate.PESOPAY, currCode: currencyCode.HKD, payType: payType.NORMAL_PAYMENT, orderRef: "2018102409220001", payMethod: "3DS2.0", lang: Language.ENGLISH, merchantId: "1",

```
remark: "",
extraData :[:])
paySDK. paymentDetails.cardDetails = CardDetails (
cardHolderName: "abc abc",
cardNo: "4918914107195011",
expMonth: "11",
expYear: "2011",
securityCode: "123")
var threeDSParams = ThreeDSParams()
threeDSParams.apiUsername = "username"
threeDSParams.apiPassword = "password"
.
.
.
.
.
.
.
.
.
```

paySDK.paymentDetails.threeDSParams = threeDSParams

Trigger the Payment:

Call the SDK to trigger the payment process. For WebView flow, it will display a In-App Webview for the payment.

paySDK.process()

Prepare Response Handler:

Initialize a payment event handler to capture the payment response and result.

```
func paymentResult(result: PayResult) {
```

}

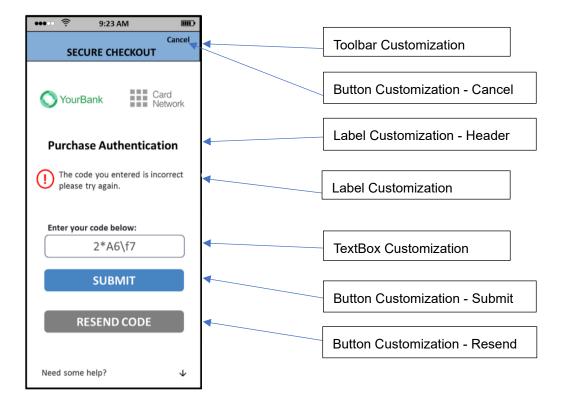

List of Parame	eters merchant can set
apiUsername	threeDSAcctCreateDate
apiPassword	threeDSAcctAgeInd

threeDSCustomerEmail	threeDSAcctLastChangeDate
threeDSDeliveryEmail	threeDSAcctLastChangeInd
threeDSMobilePhoneCountryCode	threeDSAcctPwChangeDate
threeDSMobilePhoneNumber	threeDSAcctPwChangeInd
threeDSHomePhoneCountryCode	threeDSAcctPurchaseCount
threeDSHomePhoneNumber	threeDSAcctCardProvisionAttempt
threeDSWorkPhoneCountryCode	threeDSAcctNumTransDay
threeDSWorkPhoneNumber	threeDSAcctNumTransYear
threeDSBillingCountryCode	threeDSAcctPaymentAcctDate
threeDSBillingState	threeDSAcctPaymentAcctInd
threeDSBillingCity	threeDSAcctShippingAddrLastChangeDate
threeDSBillingLine1	threeDSAcctShippingAddrLastChangeInd
threeDSBillingLine2	threeDSAcctIsShippingAcctNameSame
threeDSBillingLine3	threeDSAcctIsSuspiciousAcct
threeDSBillingPostalCode	threeDSAcctAuthMethod
threeDSShippingDetails	threeDSAcctAuthTimestamp
threeDSShippingCountryCode	threeDSDeliveryTime
threeDSShippingState	threeDSPreOrderReason
threeDSShippingCity	threeDSPreOrderReadyDate
threeDSShippingLine1	threeDSGiftCardAmount
threeDSShippingLine2	threeDSGiftCardCurr
threeDSShippingLine3	threeDSGiftCardCount

Type of Challenge for Payment via 3DS 2.0

- Challenge Information TextBox
- Single and Multi-select Fields
- Out of Band
- HTML

UI - Customization for Challenge View for Merchant

UI-Customization for paySDK

Merchant can set the UiCustomization at the paySDK initialization process.

```
let customization = UiCustomization()
let submitButtonCustomization = ButtonCustomization.init("Courier", "#FF0000", 15,
"#d3d3d3", 4)
let resendButtonCustomization = ButtonCustomization.init("Courier", "#FF0000", 15,
"#d3d3d3", 4)
let cancelButtonCustomization = ButtonCustomization.init("Courier", "#FF0000", 15,
"#d3d3d3", 4)
let nextButtonCustomization = ButtonCustomization.init("Courier", "#FF0000", 15,
"#d3d3d3", 4)
let continueButtonCustomization = ButtonCustomization.init("Courier", "#FF0000",
15, "#d3d3d3", 4)
let labelCustomization = LabelCustomization.init("Courier", "FF0000", 14, "FF0000",
"Courier", 20)
let textboxCustomization = TextBoxCustomization.init("Courier", "#FF0000", 14, 5,
"#d3d3d3", 4)
let toolBarCustomization = ToolbarCustomization.init("Courier", "#FF0000", 12,
"#d3d3d3", "HEADER LABEL")
try! customization.setButtonCustomization (submitButtonCustomization, .SUBMIT)
```

- try! customization.setButtonCustomization (resendButtonCustomization, .RESEND)
- try! customization.setButtonCustomization(cancelButtonCustomization, .CANCEL)
- try! customization.setButtonCustomization(nextButtonCustomization, .NEXT)
- try! customization.setButtonCustomization (continueButtonCustomization, .CONTINUE)
- try! customization.setLabelCustomization(labelCustomization)
- try! customization.setTextBoxCustomization(textboxCustomization)
- try! customization.setToolbarCustomization(toolBarCustomization)
- paySDK.customization = customization

Class PayData properties details:

Input Parameters	Expected Value and Description
channelType	Channel Type (PayChannel) – WebView
payGate	Name of payment gateway i.e. Paydollar or Pesopay or Siampay
envType	Production or Sandbox
merchantld	ID received after registration on Asiapay merchant portal
рауТуре	Payment Type (Normal / Hold)
orderRef	Reference number that merchant wants to attach to transaction
payMethod	Payment Method ID - please reference to Integration Guide for detail values
lang	Language of Payment Page
currency	Transaction currency, e.g. HKD, INR etc.
amount	Transaction amount
remark	More details about transaction to tag it. This is optional.
extraData	Extra Parameter
	For Installment Pay
	installment_service – installment service indicator i.e. T / F
	installment_period – In number of months
	installOnly – Control the mandatory of installment payment i.e. T / F
	For Schedule Pay
	appld - Application Id
	appRef - appref is the reference for the whole schedule pay which will be used only one timecardHolder -
	Name available on card
	schType - Schedule Type e.g. Day / Month /Year
	schStatus - Schedule Status e.g. Active / Suspended
	nSch - Number of schedule
	sMonth - Schedule start month
	sDay - Schedule start day
	sYear - Schedule start year
	eMonth - Schedule end month
	eDay - Schedule end day
	eYear - Schedule end year
	For Member Pay
	addNewMember – false or true
	memberPay_ service - T or F

memberPay_memberId - Member Id
actionType - Generate Token
memberld - Member Id
memberPay_Token – Static Token
For Promo Pay
promotion – Promotion service indicator i.e T/F
promotionCode – The promotion campaign code
promotionRuleCode – The promotion rule code (Optional)
promotionOriginalAmt – The promotion original amount (Optional)

Class EnvBase values details:

EnvBase Parameter	Value and Details
PayChannel	SDK payment channel
	WEBVIEW: WebView redirect payment
	DIRECT: Direct server payment
PayGate	SDK supported payment gateway
	PAYDOLLAR: PayDollar
	SIAMPAY: SiamPay
	PESOPAY: PesoPay
EnvType	SDK environment configuration
	PRODUCTION: Production environment
	SANDBOX: Sandbox testing environment
РауТуре	SDK payment type
	NORMAL_PAYMENT: Sales payment
	HOLD_PAYMENT: Authorize payment
Currency	SDK supported currency list
	HKD, USD, SGD, RMB, JPY, TWD, AUD, EUR, GBP, CAD, MOP, PHP, THB, MYR, IDR, KRW, BND, NZD,
	SAR, AED, BRL, INR, TRY, ZAR, VND, DKK, ILS, NOK, RUB, SEK, CHF, ARS, CLP, COP, CZK, EGP,
	HUF, KZT, LBP, MXN, NGN, PKR, PEN, PLN, QAR, RON, UAH, VEF, LKR, KWD

Class PayResult properties details:

PayResult Output	Description
Property Parameter	
successcode	Status of transaction.
channel	Channel Type (PayChannel) – WebView, Direct
resultCode	Transaction status code.
resultMsg	Message to describe more about transaction status. Message may come blank if the transaction status
	is Success.
orderID	Order ID generated by AsiaPay System
orderRef	Order Reference number set before initializing payment call in PayData object.
bankRef	Bank Order Reference number
prc	Primary response code
	Refer to Integration Guide Appendix A (PRC)
src	Secondary response code
	Refer to Integration Guide Appendix A (SRC)
txTime	Transaction Time
amount	Transaction amount
currency	Transaction currency, e.g. HKD, INR etc.
extraData	Extra Response data

9 PaySDK Android Mobile SDK

This section explains integration of PaySDK iOS SDK in merchant android mobile application.

A) SDK Integration Steps

SDK requirement

JAVA SDK Version: 1.8 Android SDK Version: 19 (Minimum), 28 (Target)

SDK Configuration

}

- Copy PaySDK-1.0.0.aar to libs folder.
- Add below line to project's gradle file:

```
repositories {
 flatDir {
  dirs 'libs'
 }
```

• Add below lines in the dependencies to project's gradle file:

implementation(name: 'PaySDK-1.0.0', ext: 'aar')

• Add following libraries

```
implementation fileTree(dir: 'libs', include: ['*.jar'])
implementation 'com.google.code.gson:gson:2.3.1'
implementation 'org.bouncycastle:bcprov-jdk15on:1.60'
implementation 'com.android.volley:volley:1.1.1'
implementation 'com.fasterxml.jackson.core:jackson-core:2.7.3'
implementation 'com.fasterxml.jackson.core:jackson-annotations:2.7.3'
implementation 'com.fasterxml.jackson.core:jackson-databind:2.7.3'
implementation 'org.greenrobot:eventbus:3.0.0'
```

SDK Initialization:

Create the paysdk.properties file in the assets folder with the following attributes RSA Public Key(SDK) :- Here you need to specify RSA Public Key value by removing Header and footer of public key. The value will be provided when the merchant apply the SDK service.

e.g.

sdk_rsa_publickey=MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEA3hOz7Ekyf9YLDJ RzUxJSeFfAxjIW/8Kd8v+tKK/Tc+3KyOHADlV7NYtlGDyoH5dCApUGHrxaYbzV6VzhC+kgQIaL7m jzMXX2uK03QT8Gmcef4C20fUMpy3hrIRH5MR32THNI3IiQG7upkuKhwQSwvEz0PxTeIznCBvSY/7 wgCC6CUhHt+INZYaYpNRiozy39+yHXvgJu4N+I7VQpXJ6b4QjARk6nq6dBlUge4HokZgQzfKL86P JfzOjIDDKABkbZcZ96AL48E1jvgXlqV0ZA2k81IEVQzJxEiuERcPpSTXzB9H3f8+sx8DWxU0/CDI iNI+XOt54sBMelPEFQgEjkCQIDAQAB

NOTE: Naming of property file and its attributes must be same.

1. Declare Object of SDK

PaySDK paySDK;

2. Initialize SDK in a background task, other than main UI thread. For this create an asyn task. For 3D Secure 2.0 transaction, there can be scenario where ACS can ask for more details to authenticate the user. Hence as per the data received from ACS, SDK launch a screen to process challenge User Interface to user.
Merchant can customice this III by putting III related infe like text. font size, font name ato in

Merchant can customise this UI by putting UI related info like text – font size, font name etc. in UiCustomisation object.

```
private class initaliseSDK extends AsyncTask<String, Void, String> {
      @Override
      protected String doInBackground(String... params) {
          Factory factory = new com.asiapay.sdk.integration.xecure3ds.Factory();
          paySDK = new PaySDK(getApplicationContext());
          return "";
      }
      @Override
      protected void onPostExecute(String result) {
      //Cancel ProgressDialog if displayed before initializing sdk
       }
      @Override
      protected void onPreExecute() {
          //show progress dialog if want
      }
      00verride
      protected void onProgressUpdate(Void... values) {
      }
}
```

3. Call the above async task:

new initaliseSDK().execute("");

B) Webview Payment Call

Prepare Payment Call :

Initialize the PayData object and prepare the payment detail for the transaction.

```
PayData payData = new PayData();
payData.setChannel(EnvBase.PayChannel.WEBVIEW);
payData.setEnvType(EnvBase.EnvType.SANDBOX);
payData.setAmount("10");
payData.setPayGate(EnvBase.PayGate.PESOPAY);
payData.setCurrCode(EnvBase.Currency.HKD);
payData.setCurrCode(EnvBase.PayType.NORMAL_PAYMENT);
payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT);
payData.setOrderRef("2018102409220001");
payData.setPayMethod("VISA");
payData.setMerchantId("1");
payData.setRemark("");
payData.setLang(EnvBase.Language.ENGLISH);
paySDK.setRequestData(payData);
```

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
});
```

Trigger the Payment:

Call the SDK to trigger the payment process. For WebView flow, it will display a In-App Webview for the payment.

paySDK.process();

WebView Sample :

<u>ک</u>	🗙 🖘 االه 🕄 14:08		× 🗟 🔰	6% 🖻 14:08
ExportingSample		Ехро	ortingSample	
pay dollar PAYDOLLAR PAYM	IENT SERVICE	pay dollar	PAYDOLLAR PAYMENT SERVICE	
Test SDK Transaction Amount :	VISA HKD 10.00	۲ ا ۲ P	The page at "https://test paydollar.com" says: Please review your payment detai	ls :
Merchant Ref No.: Card Number: Expiry Date: Card Holder Name: Card Verification No.: Transaction IP Address	2018102409220001 4918914107195005 12 ▼/ 2020 ▼ test card : 202.189.254.46 Cancel	N T C Q E 4 C E N C Q T M	Merchant Name : Test SDK Transaction Amount : HKD 10.00 Payment Method : VISA Card Number : 1918-9141-0719-5005 Expiry Date (mm/yyyy) : 12/2020 Name as shown on card : test car Card Verification Number : *** Merchant Reference No.: 2018102409220001	
		ь	CANCEL (ОК
Powered by pa Copyright © 2014 AsiaPay L			Powered by paydollar.com Copyright © 2014 AsiaPay Limited. All rights reserve	d

Avoid memory leak :-

Here all unused objects will be set to null and clean up the payData and payResult object.

paySDK.cleanMemory();

C) Direct Payment Call

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
payData = new PayData();
payData.setChannel(EnvBase.PayChannel.DIRECT);
payData.setEnvType(EnvBase.EnvType.SANDBOX);
payData.setAmount("15");
payData.setPayGate(EnvBase.PayGate.PESOPAY);
payData.setCurrCode(EnvBase.Currency.HKD);
payData.setCurrCode(EnvBase.PayType.NORMAL_PAYMENT);
payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT);
payData.setOrderRef("2018102409220001");
payData.setPayMethod("VISA");
payData.setLang(EnvBase.Language.ENGLISH);
payData.setMerchantId("1");
payData.setRemark(" ");
```

```
CardDetails cardDetails=new CardDetails();
cardDetails.setCardNo("4548890133258926");
cardDetails.setEpMonth("08");
cardDetails.setEpYear("2020");
cardDetails.setSecurityCode("123");
cardDetails.setCardHolder("test Card");
payData.setCardDetails(cardDetails);
```

paySDK.setRequestData(payData);

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
}
```

});

Trigger the Payment: Call the SDK to trigger the payment process. paySDK.process();

D) Installment Payment Call

For Installment Pay with Webview & Direct Payment Call follow same process of (1.1 & 1.2) reps. & add below extra params.

```
extraData.put("installment_service","T");
extraData.put("installment_period","6");
extraData.put("installOnly","T");
```

E) Schedule Pay

For Schedule Pay with Webview & Direct Payment Call follow same process (1.1 & 1.2) reps. & add below extra params

```
extraData.put("schType","Day"); // Value could be Day/Month/Year
extraData.put("schStatus","Active"); // Value could be Active/Suspend
extraData.put("nSch","1");
extraData.put("sMonth","4");
extraData.put("sDay","26");
extraData.put("sYear","2019");
extraData.put("eMonth","");
extraData.put("eMonth","");
extraData.put("eDay","");
extraData.put("eYear","");
extraData.put("erear","");
extraData.put("name","Name");
extraData.put("email","kit@igears.com.hk");
extraData.put("appId","SP");
extraData.put("appRef","2018102409220001"); //appRef should be used only once
```

F) Member Pay

For New Member:

For Member Pay Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters. Add parameter addNewMember. If merchant making payment for first time then value should be true

```
extraData.put("memberPay_service","T");
extraData.put("memberPay_memberId","member03");
extraData.put("addNewMember","True");
```

For Old Member:

For Member Pay Payment, initialize the PayData class and prepare the payment detail for the transaction same as in with Webview and Direct Payment Call and add below parameters. Add parameter addNewMember. If merchant making payment not for first time then value should be false and below will be extra parameters.

```
extraData.put("memberPay_service","T");
extraData.put("memberPay_memberId","member03");
extraData.put("addNewMember","False");
extraData.put("memberPay_token","7ff6c7cc1f03fd9889b000843a77e8f43e4467578926");
```

G) Promo Pay

For Promo Pay with Webview Call follow the same process of (1.1) & add the below extra params.

```
extraData.put("promotion","T");
extraData.put("promotionCode","TEST1");
extraData.put("promotionRuleCode","TESTR25");
extraData.put("promotionOriginalAmt","");
```

H) Alipay Global Payment Call

SDK Integration Steps:

- 1) Copy alipaySdk-15.5.9-20181123210601.aar to lib folder.
- 2) Add below lines in the dependencies to app's gradle file:

implementation(name: 'alipaySdk-15.5.9-20181123210601', ext: 'aar')
implementation "com.squareup.okhttp3:okhttp:3.12.0"

Initiating Order Payment for Alipay:

To initiate order payment, we need to instantiate PayReq class and call public method pay() by passing the payment related data to this.

Step 1: Prepare object that contains details to initialize payment.

PayData payData = new PayData(); payData.setChannel(EnvBase.PayChannel.DIRECT); payData.setEnvType(EnvBase.EnvType.SANDBOX); payData.setPayGate(EnvBase.PayGate.PESOPAY); payData.setCurrCode(EnvBase.Currency.HKD); payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT); payData.setLang(EnvBase.Language.ENGLISH); payData.setAmount("1"); payData.setAmount("1"); payData.setPayMethod("ALIPAYAPP"); payData.setMerchantId("1"); payData.setOrderRef("2018102409220001"); payData.setRemark("payment remark"); payData.setActivity(MainActivity.this); paySDK.setRequestData(payData);

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
});
```

This method returns object of PayResult class.

I) Alipay HK Payment Call

Prepare Payment Call :

Initialize the PayData object and prepare the payment detail for the transaction.

PayData payData = new PayData(); payData.setChannel(EnvBase.PayChannel.DIRECT); payData.setEnvType(EnvBase.PayChannel.DIRECT); payData.setPayGate(EnvBase.EnvType.SANDBOX); payData.setCurrCode(EnvBase.PayGate.PESOPAY); payData.setCurrCode(EnvBase.Currency.HKD); payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT); payData.setLang(EnvBase.Language.ENGLISH); payData.setAmount("1"); payData.setAmount("1"); payData.setPayMethod("ALIPAYHKAPP"); payData.setOrderRef("2018102409220001"); payData.setRemark("payment remark"); payData.setActivity(MainActivity.this); paySDK.setRequestData(payData);

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
});
```

This method returns object of PayResult class.

J) Alipay China Payment Call

Prepare Payment Call :

Initialize the PayData object and prepare the payment detail for the transaction.

```
PayData payData = new PayData();
payData.setChannel(EnvBase.PayChannel.DIRECT);
payData.setEnvType(EnvBase.PayGate.PESOPAY);
payData.setPayGate(EnvBase.PayGate.PESOPAY);
payData.setCurrCode(EnvBase.Currency.RMB);
payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT);
payData.setLang(EnvBase.Language.ENGLISH);
payData.setAmount("1");
payData.setAmount("1");
payData.setMerchantId("1");
payData.setOrderRef("2018102409220001");
payData.setRemark("payment remark");
payData.setActivity(MainActivity.this);
paySDK.setRequestData(payData);
```

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
});
```

This method returns object of PayResult class.

K) WeChat Pay Payment Call

Prepare Payment Call :

Initialize the PayData object and prepare the payment detail for the transaction.

```
PayData payData = new PayData();
payData.setChannel(EnvBase.PayChannel.DIRECT);
payData.setEnvType(EnvBase.PayGate.PESOPAY);
payData.setPayGate(EnvBase.PayGate.PESOPAY);
payData.setCurrCode(EnvBase.Currency.RMB);
payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT);
payData.setLang(EnvBase.Language.ENGLISH);
payData.setAmount("1");
payData.setAmount("1");
payData.setMerchantId("1");
payData.setMerchantId("1");
payData.setOrderRef("2018102409220001");
payData.setRemark("payment remark");
payData.setActivity(MainActivity.this);
paySDK.setRequestData(payData);
```

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

```
paySDK.responseHandler(new PaymentResponse() {
    @Override
    public void getResponse(PayResult payResult) {
    }
    @Override
    public void onError(data: Data) {
    }
});
```

This method returns object of PayResult class.

L) 3DS 2.0 Payment Call

Prepare Payment Call:

Initialize the PayData class and prepare the payment detail for the transaction.

```
payData = new PayData();
payData.setChannel(EnvBase.PayChannel.DIRECT);
payData.setEnvType(EnvBase.EnvType.SANDBOX);
payData.setAmount("15");
payData.setPayGate(EnvBase.PayGate.PESOPAY);
payData.setCurrCode(EnvBase.Currency.HKD);
payData.setCurrCode(EnvBase.PayType.NORMAL_PAYMENT);
payData.setPayType(EnvBase.PayType.NORMAL_PAYMENT);
payData.setOrderRef("2018102409220001");
payData.setPayMethod("3DS2.0");
payData.setLang(EnvBase.Language.ENGLISH);
payData.setMerchantId("1");
payData.setRemark(" ");
```

```
CardDetails cardDetails=new CardDetails();
cardDetails.setCardNo("4548890133258926");
cardDetails.setEpMonth("08");
cardDetails.setEpYear("2020");
cardDetails.setSecurityCode("123");
cardDetails.setCardHolder("test Card");
payData.setCardDetails(cardDetails);
ThreeDSParams threeDSParams = new ThreeDSParams();
threeDSParams.setUsername("username");
```

• • •

payData.setThreeDSParams(threeDSParams);

paySDK.setRequestData(payData);

Prepare Response Handler :

Initialize a payment event handler to capture the payment response and result.

paySDK.responseHandler(new PaymentResponse() {

```
@Override
public void getResponse(PayResult payResult) {
}
```

```
@Override
```

```
public void onError(data: Data) {
```

});

}

Trigger the Payment:

Call the SDK to trigger the payment process.

paySDK.process();

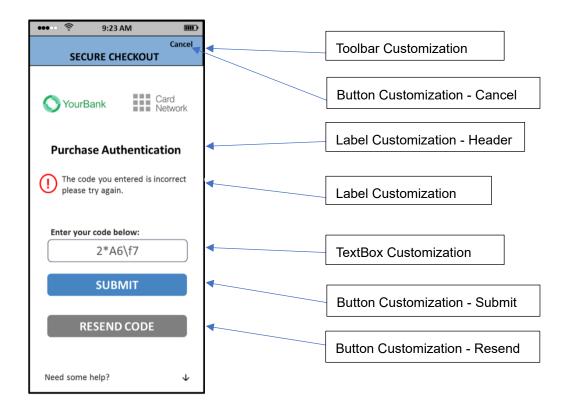

List of Parameters merchant can set		
apiUsername	threeDSAcctCreateDate	
apiPassword	threeDSAcctAgeInd	
threeDSCustomerEmail	threeDSAcctLastChangeDate	
threeDSDeliveryEmail	threeDSAcctLastChangeInd	
threeDSMobilePhoneCountryCode	threeDSAcctPwChangeDate	
threeDSMobilePhoneNumber	threeDSAcctPwChangeInd

threeDSShippingLine2	threeDSGiftCardCurr
threeDSShippingLine3	threeDSGiftCardCount

Type of Challenge for Payment via 3DS 2.0

- Challenge Information TextBox
- Single and Multi-select Fields
- Out of Band
- HTML

UI - Customization for Challenge View for Merchant

UI-Customization for paySDK

Merchant can add UiCustomization at the paySDK initialization process .

```
private class initaliseSDK extends AsyncTask<String, Void, String> {
    @Override
    protected String doInBackground(String... params) {
```

}

```
Factory factory = new com.asiapay.sdk.integration.xecure3ds.Factory();
ConfigParameters configParameters = factory.newConfigParameters();
UiCustomization uiCustomization = factory.newUiCustomization();
paySDK = new PaySDK(AuthActivity.this, configParameters,
uiCustomization);
return "";
}
```

Class PayData properties details:

Input Parameters	Expected Value and Description			
setChannel	Channel Type (EnvBase.PayChannel) – WebView, Direct			
setPayGate	Name of payment gateway i.e. Paydollar or Pesopay or Siampay			
setEnvType	Production or Sandbox			
setMerchantID	ID received after registration on Asiapay merchant portal			
setPayType	Payment Type (Normal / Hold)			
setOrderRef	Reference number that merchant wants to attach to transaction			
setPayMethod	Payment Method ID - please reference to Integration Guide for detail values			
setLang	Language of Payment Page			
setCurrency	Transaction currency, e.g. HKD, INR etc.			
setAmount	Transaction amount			
setAddNewMember	If merchant making payment for first time then value should be true else false			
setActivity	Reference of the Activity class which is calling Alipay.			
setRemark	More details about transaction to tag it. This is optional.			
setExtraData	Extra Parameter			
	For Installment Pay			
	installment_service – Installment service indicator i.e T/F			
	installment_period - In number of months			
	installOnly - Control the mandatory of installment payment i.e. T / F			
	For Schedule Pay			
	For Member Pay			
	memberPay_service – MemberPay service indicator I.e T/F			
	memberPay_memberId – Member ID			
	addNewMember – True / False			
	For Promo Pay			
	promotion – Promotion service indicator I.e T/F			
	promotionCode – The promotion campaign code			
	promotionRuleCode – The promotion rule code (Optional)			
	promotionOriginalAmt – The promotion original amount (Optional)			
	For Schedule Pay			
	appld - Application Id			
	appRef - appref is the reference for the whole schedule pay which will be used only one time			

schType - Schedule Type could be Day/Month/Year
schStatus - Schedule Status could be Active/Suspend
nSch - Number of schedule
sMonth - Schedule start month
sDay - Schedule start day
sYear - Schedule start year
eMonth - Schedule end month
eDay - Schedule end day
eYear - Schedule end year

Class EnvBase values details:

EnvBase Parameter	Value and Details		
PayChannel	SDK payment channel		
	WEBVIEW: WebView redirect payment		
	DIRECT: Direct server payment		
PayGate	SDK supported payment gateway		
	PAYDOLLAR: PayDollar		
	SIAMPAY: SiamPay		
	PESOPAY: PesoPay		
EnvType	SDK environment configuration		
	PRODUCTION: Production environment		
	SANDBOX: Sandbox testing environment		
РауТуре	SDK payment type		
	NORMAL_PAYMENT: Sales payment		
	HOLD_PAYMENT: Authorize payment		
Currency	SDK supported currency list		
	HKD, USD, SGD, RMB, JPY, TWD, AUD, EUR, GBP, CAD, MOP, PHP, THB, MYR, IDR, KRW, BND, NZD,		
	SAR, AED, BRL, INR, TRY, ZAR, VND, DKK, ILS, NOK, RUB, SEK, CHF, ARS, CLP, COP, CZK, EGP,		
	HUF, KZT, LBP, MXN, NGN, PKR, PEN, PLN, QAR, RON, UAH, VEF, LKR, KWD		

Class PayResult properties details:

PayResult Output	Description	
Property Paramete		
getSuccesscode	Status of transaction.	
getChannel	Channel Type (EnvBase.PayChannel) – WebView, Direct	
getResultCode	Transaction status code.	
getResultMsg	Message to describe more about transaction status. Message may come blank if the transaction status is Success.	
getOrderID	Order ID generated by AsiaPay System	
getOrderRef	Order Reference number set before initializing payment call in PayData object.	
getBankRef	Bank Order Reference number	
getPrc	Primary response code	
	Refer to Integration Guide Appendix A (PRC)	
getSrc	Secondary response code	
	Refer to Integration Guide Appendix A (SRC)	
getTxTime	Transaction Time	
getAmount	Transaction amount	
getCurrency	Transaction currency, e.g. HKD, INR etc.	
getExtraData	Extra Response data	
getOutTradeNo	Transaction number of Alipay for reference.	

10 Frequently Asked Questions

System Setup

1. What programming languages are supported in the Integration?

HTML, ASP, PHP, JSP / Servlet, and any other server side scripting languages that support HTTP protocol.

 Is there any consideration on firewall issues on Merchants side? Merchants have to open HTTP port for data feed handling, i.e. port 80(HTTP) / port 443(HTTPS).

3. Does PesoPay PayGate support any shopping cart software?

Technically yes. You are however required to know how to deploy the shopping cart software to work for your requirements. Samples include <u>OSCommerce</u>.

Common Problems

4. During the integration I encounter the error message "Your payment service is not active."

Make sure you are using the corresponding pair of merchant ID and integration URL. If you are using the TESTING URL (test.pesopay.com), the TESTING merchant ID, a 6-digits number, should be used. If you are using the PRODUCTION URL (<u>www.pesopay.com</u>), PRODUCTION merchant ID should be used, which is 4-digits number or 8-digits number.

- 5. During the integration I encounter the error message "CurrCode is incorrect." One PesoPay merchant ID only allows one currency. Make sure you are using the corresponding currency for the merchant ID in the HTML form. To apply multi-currencies, please contact our salespersons to open additional merchant accounts.
- 6. Can I make use of the calling of successUrl / failUrl / cancelUrl solely to determine the transaction status?

Customer may call the successUrl / failUrl / cancelUrl (with the merchant reference appended) in the browser and pretend the transaction is completed. Thus we recommend merchants to use data feed to determine the transaction status. Since PesoPay and the merchant are the only parties with the knowledge of the data feed URL, it is safe to determine the status by using the data feed.

 What is the difference between the parameters: Ref (orderRef), PayRef and Ord? Ref (orderRef) is merchant's own order reference number. This comes from merchant's database or invoices.

PayRef is PesoPay order reference number. It is unique among all orders from different merchants in PesoPay system.

Ord is bank reference number. It is generated by acquiring banks.

To seek help on transactions, please provide PayRef (preferred) or Ref to us.

Data Feed

8. How do I make use of the data feed?

You may make use of the data passed from PesoPay in the data feed to update your database records regarding the transaction. Since merchant reference can be retrieved from data feed, you can make use of this key to update the corresponding transaction records of your system(s).

9. How to set up data feed in my merchant account?

You can enable or disable the data feed function in the merchant administration site > Profile > Payment Options.

10. How do I know if the data feed is set up properly?

You may go to transaction details in the merchant administration site, select output columns "Data Feed Ind." and "Data Feed Return" and view the transaction records. If the data feed indicator is "T", the data feed is set up properly. However, if the indicator is "F", you may look at the "Data Feed Return" column and see what the error is. You may ask our technical team to assist when it relates to data feed setup.

In addition, you can enable "Data Feed Failure Alert by Email" in the merchant administration site > Profile > Payment Options. When it is enabled, and if there is any failure on calling Merchant's data feed, an email will be sent to Merchant's technical contact email account.

11. What programming languages can be used in writing data feed page?

Any programming languages that can handle HTTP Post request parameters can be used.

12. How do I write the data feed page? Should the data feed page display anything on the screen?

The data feed page contains 3 parts, receive HTTP parameters, print 'OK' and your own backend processing (e.g. update database, send email to customer, etc.).

The data feed page is called in the back end. It should not display anything, i.e. no HTML code. However it should respond with the word 'OK' to let our server know that you have successfully received the data feed.

13. How do I know for sure the data feed is calling from PesoPay?

You may check if the data feed HTTP request is calling from these IP ranges. Testing: 203.105.61.183 – 203.105.61.218 Production: 103.149.149.1 – 103.149.149.62

14. There is data feed error return

"javax.net.ssl.SSLHandshakeException: sun.security.validator.ValidatorException: No trusted certificate found"

Our server cannot recognize your SSL certificate provider. Please contact our I.T. team to resolve the issues. When necessary you will be asked to provide your CA root certificate.

15. Auto retry failed datafeed

(Applicable for merchants who have registered the datafeed link and retry function)

Sometimes, you may not be able to receive the datafeed response due to reasons like internet connection issue, incorrect datafeed URL being used, etc.

After enabling the "Auto retry failed data feed", datafeed will be resent:

- (1) immediately after the original attempt is failed, and
- (2) 15 minutes after if (1) is also failed

3-D Secure Authentication

16. Can I use FRAMES in designing our website?

Some card issuing banks require Cookies when entering their 3D authentication page. Full page (i.e. no FRAMES) is required in this situation.

Furthermore, the SSL indicator should be displayed somewhere on the browser window to let customers know that the site is secure enough to enter sensitive information such as credit card number. When FRAMES is used, the SSL indicator may not appear if the page required SSL is inside the frame window.

Therefore, it is suggested not to use FRAMES after the HTML form is submitted to PesoPay. You may consider opening another browser window to handle payment transactions.

17. Can I ask for disabling 3-D Secure authentication for my transactions?

This is subject to bank's sole decision. You may be asked for providing business information in order to help the bank risk management team to evaluate your company profile before special approval. Nonetheless, you should be well aware the serious consequences of fraudulent non-3D transactions.

Data Security

18. Can I store the credit card information of my customers?

We recommend our merchants NOT to store credit card information, especially credit card number, expiry date and CVV2 / CVC2. Even if absolute necessary, please ensure to encrypt the data compliant to Visa A.I.S. (Account Information Security) program. You may refer to the following webpage: <u>http://www.visa-asia.com/ap/sea/merchants/riskmgmt/ais_what.shtml</u>. Credit card information stored in PesoPay complies with Visa A.I.S. and MasterCard SDP programs.

Support

- 19. Who should we contact in case we encounter problems during testing and in production? You can contact our I.T. team by either of the following ways.
 - a. Email: it@pesopay.com
 - b. Technical hotline: (852) 82267981 (852) 31731990

APPENDIX A

PesoPay Payment Response Code

PesoPay Payment Response Code is composed of the following items:

1. Primary Response Code (PRC)

The primary response code is the main response code used for identifying the authorization status of a payment transaction.

The following table provides a summary of all the response codes which may be returned:

PRC	Description
0	Success
1	Rejected by Payment Bank
3	Rejected due to Payer Authentication Failure (3D)
9	Rejected by Other Reason (Please check the Reject
	Reason at the transaction)
-1	Rejected due to Input Parameters Incorrect
-2	Rejected due to Server Access Error
-8	Rejected due to PesoPay Internal/Fraud Prevention Checking
-9	Rejected by Host Access Error

2. Secondary Response Code (SRC)

The secondary response code provides the detail description corresponding to the primary response code.

List of Response Code
